

FARRAGUT MUNICIPAL PLANNING COMMISSION AGENDA

November 19, 2020

7:00 p.m.

This meeting can be viewed live on the Farragut YouTube Channel, www.townoffarragut.org/livestream, Charter Channel 193, and TDS Channel 3." The meeting will be held virtually, authorized by Governor Lee's executive orders regarding the COVID19 pandemic.

Meeting comments may be emailed to <u>comments@townoffarragut.org</u> and must be received by 12:00 p.m. on November 19 to be included in the record of the meeting. Anyone that wishes to provide comments <u>must include their name and address</u>. For questions please e-mail Mark Shipley at <u>mshipley@townoffarragut.org</u> or Bart Hose at <u>bhose@townoffarragut.org</u>.

- 1. Approval of agenda
- 2. Approval of minutes October 15, 2020
- Discussion and public hearing on a re-subdivision plat involving nine lots in the Easton Park Subdivision located on the north side of Turkey Creek Road across from a portion of Anchor Park, Zoned R-3, 2.37 Acres (SITE, Incorporated, Applicant)
- Discussion and public hearing on a final plat for the Ivey Farms Subdivision, Unit 1, Phase 1, located on the north side of Union Road, Zoned R-1/OSR, 6.26 Acres, 26 Lots (SITE, Incorporated, Applicant)
- Discussion and public hearing on a site plan for a parking lot addition at the St. Elizabeth's Episcopal Church, 110 Sugarwood Drive, Zoned C-1, 4.54 Acres (Urban Engineering, Inc., Applicant)
- Discussion and public hearing on a site plan for the property located at 13036 and 13038 Kingston Pike, Zoned C-1, 2 Acres (GBS Engineering, Applicant)
- Discussion and public hearing on a concept plan for the Meadows on McFee, 933 and 1013 McFee Road, Zoned R-1/OSR, 32 Acres, 59 Lots (Homestead Land Holdings, LLC, Applicant)
- Discussion and public hearing on a request to amend Appendix A Zoning, Chapter 3., Specific District Regulations, Section XII., General Commercial District (C-1), B., 3., as it relates to the outdoor display and or storage of general farm implements and lawn care

equipment, riding lawn mowers, and related accessories (Farragut Lawn and Tractor, Applicant)

- Discussion on a rezoning of property situated around the eastern intersection of McFee Road and Boyd Station Road, Parcels 50, 50.01, 54.01, and 9.01, Tax Map 162, 12611 Boyd Station Road, from General Single-Family Residential (R-2) to Open Space Mixed Residential Overlay (R-1/OSMR), 131.25 Acres (OBO Homestead Land Holdings, Applicant)
- 10. Discussion and public hearing on a request to amend the future land use map in the Comprehensive Land Use Plan Update for a portion of Parcel 003.19, Tax Map 143 (a portion of the property referenced as 133 Concord Road) associated with the Farragut Town Center at Biddle Farms project from Medium Density Residential to Town Center (CHM, LLC, Applicant)
- 11. Discussion and public hearing on a request to amend the Farragut Zoning Map in association with the Farragut Town Center at Biddle Farms project, 11230 and 11240 Kingston Pike and 133 Concord Road, Parcels 3.02, 3.03, 3.10, and a portion of 3.19, Tax Map 143, from General Commercial (C-1) and General Single-Family Residential (R-2) to Planned Commercial Development (PCD), 43.63 Acres (CHM, LLC, Applicant)

12. Approval of utilities

13. Citizen Forum

Planning Commission Meeting Public Comment Protocol

The Planning Commission welcomes and invites Farragut residents to participate in public meetings.

At the end of each business meeting, there will be time reserved for public comment under the Citizen Forum agenda item. If you are interested in speaking, please fill out a blue comment card and turn it in to the Planning Director or other designated staff member. For virtual meetings, comments may be emailed to comments@townoffarragut.org and must be received by 12:00 p.m. on the date of the meeting to be included in the record of the meeting. Anyone that wishes to provide comments must include their name and address. This time is set aside specifically for comments on items that are not on the Planning Commission regular agenda for the meeting. Each speaker will be given five (5) minutes to speak on his/her topic.

During the regular agenda portion of the meeting there may be an allowance for public comment for each agenda item. The Chairman may recognize individuals for public comment based on the following guidelines.

 The Chairman shall maintain and control the meeting to provide a professional and objective environment;

- 2. Any Farragut resident, property owner, or business owner interested in speaking should fill out a blue comment card stating which agenda item they would like to comment on and turn in to the Planning Director or other designated staff member;
- Speakers shall come to the podium and identify themselves by name and street address;
- Public comment shall be limited to five (5) minutes per individual. Time for public comment may be amended at the discretion of the Chairman. Time is not transferable to other speakers;
- Speakers should strive to avoid redundancy; each speaker should have their own original viewpoint;
- 6. Comments shall address issues, not individuals or personalities;
- Comments may support or oppose issues or measures, but the motives of those with differing views shall not be questioned or attacked;
- 8. Personal attacks and malicious comments shall not be tolerated;
- 9. An applicant, and/or their representative(s), for an item on the regular agenda shall be afforded the time necessary to present their request and respond to questions. The five (5) minute limitation shall not apply. However, the Chairman may ask an applicant to stay on point in order to facilitate the efficiency of the meeting.

Each speaker will be asked if they can agree to abide by the Comment Protocol. If so, please be prepared to speak when your name is called.

MINUTES FARRAGUT MUNICIPAL PLANNING COMMISSION

October 15, 2020

MEMBERS PRESENT

MEMBERS ABSENT

Rita Holladay, Chairman
Ed St. Clair, Vice-Chairman
Ron Williams, Mayor
Louise Povlin
Scott Russ
Jon Greene
Betty Dick
Noah Myers
Michael Bellamy

Staff Representatives: Mark Shipley, Community Development Director

This meeting was conducted through a remote Webex session due to Governor Lee's orders and the Knox County Health Department's orders regarding the COVID-19 pandemic.

Chairman Holladay called the meeting to order at 7 p.m. and provided background on why the meeting was being conducted through Webex and where it may be viewed.

1. Approval of agenda

Staff recommended approval of the agenda as submitted.

A motion was made by Mayor Williams to approve the agenda as presented. Motion was seconded by Commissioner Povlin and motion passed 9-0 through a roll call vote.

2. Approval of minutes – September 17, 2020

Staff recommended approval of the minutes as submitted.

A motion was made by Mayor Williams to approve the minutes as submitted. Motion was seconded by Commissioner Myers and motion passed 9-0 through a roll call vote.

 Discussion and public hearing on a request for a comcast cable line installation along the south side of Parkside Drive west of JCPenney and terminating at 11416 Grigsby Chapel Road (Fulghum, MacIndoe and Associates, Applicant)

Staff reviewed this item and recommended approval subject to the following conditions:

 Please obtain a right of way permit from the Town and satisfy any field related requirements from the engineering staff;

FMPC Minutes October 15, 2020 Page 2

- Please restore any affected areas to their pre-construction condition and ensure that all affected areas are completely stabilized;
- 3) Please notify any affected property owners;
- 4) Please ensure that proper traffic control measures are in place; and
- Please provide an as-built of the fiber installation to the Town once the project is complete.

After an initial motion and second was made, commissioners discussed this item and Commissioner Myers asked if a letter of credit should be provided similar to what has been required for some other recent utility projects. Based on feedback from other commissioners, a motion was made by Commissioner St. Clair to follow staffs' recommendation with the exception of adding as a 6th condition "Providing a letter of credit to ensure any disturbed areas are corrected with the dollar amount to be determined by the Town Engineer." Motion was seconded by Mayor Williams and motion passed 9-0 through a roll call vote.

Discussion and public hearing on a re-subdivision plat for the property located at 204 Boring Lane, Parcel 074.00, Tax Map 142, Zoned R-1, 7.57 Acres (Benjamin Moorman, Applicant)

Staff reviewed this item and noted that the applicant has requested a variance from the Subdivision Regulations to not construct a pedestrian facility along the Boring Road frontage. Staff indicated that separate action would be needed on the variance. Staff recommended approval of the variance due to the minor nature of the subdivision and the amount of frontage along which the pedestrian facility would be required. Approval of the variance would also be consistent with similar minor re-subdivisions on non-local streets that have been approved by the Planning Commission. Staff indicated that they have verified that a plat note has been added to indicate that the pedestrian facility requirement will be re-visited by the Planning Commission if any additional re-division of the property is proposed.

Commissioners discussed the variance request and Commissioner Myers asked that the location of the property be clarified by including a reference to the tax map and parcel. Staff indicated that this would be updated in the minutes. A motion was made by Commissioner Povlin to approve the variance for the reasons noted by staff. Motion was seconded by Commissioner St. Clair and motion passed 9-0 through a roll call vote.

Staff then recommended approval of the plat subject to obtaining required signatures.

A motion was made by Commissioner Povlin to follow staffs' recommendation. Motion was seconded by Commissioner Myers and motion passed 9-0 through a roll call vote.

5. Discussion and public hearing on a rezoning of the property at 933 McFee Road from Agricultural (A) to Open Space Residential Overlay (R-1/OSR), 7 Acres (Rackley Engineering, Applicant)

Staff reviewed this item and recommended approval of Resolution PC-20-15 which recommends approval of Ordinance 20-22.

A motion was made by Commissioner Povlin to follow staffs' recommendation. Motion was seconded by Commissioner St. Clair and motion passed 9-0 through a roll call vote.

FMPC Minutes October 15, 2020 Page 3

6. Discussion and public hearing on an amendment to the <u>Farragut Municipal Code</u>, Appendix A., Zoning, Chapter 4., Section XXIX, - Grand Opening Special Events Permit, to provide for different sign related provisions (Town of Farragut, Applicant)
Staff reviewed this item and recommended approval of Resolution PC-20-16 which recommends approval of Ordinance 20-23.

Commissioners reviewed the item and Commissioner Bellamy asked that Section C., 8. be amended to change the phrase "good condition" to "same condition as issued." Staff and commissioners were in agreement with the proposed modification. A motion was made by Commissioner Povlin to approve Resolution PC-20-16 with the modification recommended by Commissioner Bellamy. Motion was seconded by Commissioner Myers and motion passed 9-0 through a roll call vote.

7. Discussion on a request to amend Appendix A – Zoning, Chapter 3., Specific District Regulations, Section XII., General Commercial District (C-1), B., 3., as it relates to the outdoor display and or storage of general farm implements and lawn care equipment, riding lawn mowers, and related accessories (Farragut Lawn and Tractor, Applicant) For discussion purposes only.

8. Approval of utilities

None

9. Citizen Forum

Staff read into the record citizen comments that were submitted for items that were not on the agenda.

REPORT TO THE FARRAGUT MUNICIPAL PLANNING COMMISSION

PREPARED BY: Bart Hose, Assistant Community Development Director

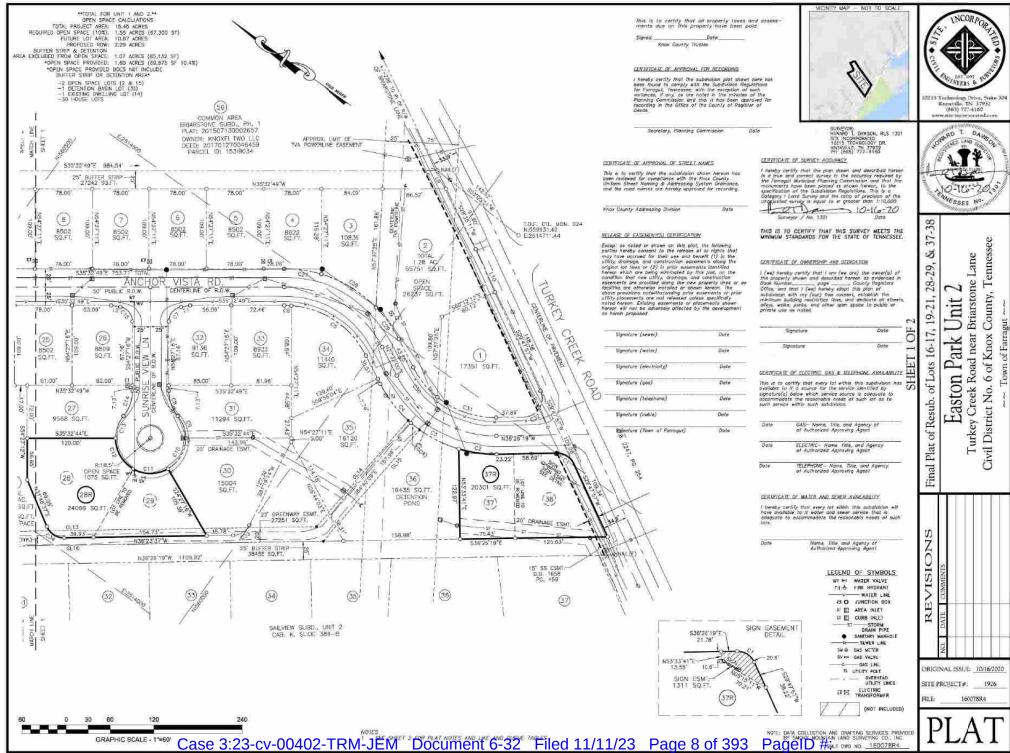

SUBJECT: Discussion and public hearing on a re-subdivision plat involving nine lots in the Easton

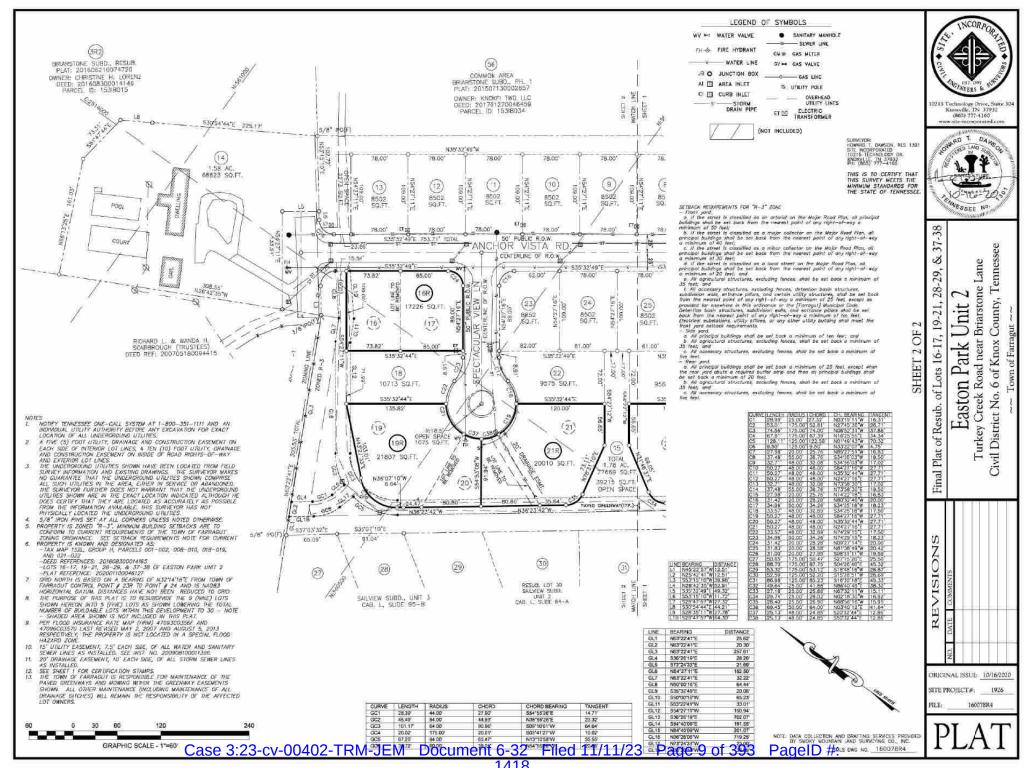

Park Subdivision located on the north side of Turkey Creek Road across from a portion of

Anchor Park, Zoned R-3, 2.37 Acres (SITE, Incorporated, Applicant)

INTRODUCTION AND BACKGROUND: This item involves the re-subdivision/re-platting of nine (9) lots in Unit 2 of the Easton Park Subdivision. The nine (9) existing lots are being combined to form five (5) lots. The number of lots is being reduced to allow the developer to construct the remaining homes in the subdivision without residential fire sprinkler systems. Under the Town's current fire code, a subdivision with more than 30 lots and only a single point of ingress/egress must utilize residential fire sprinklers.

RECOMMENDATION: Included in your packet is the applicant's revised plat. Staff will make a recommendation at the meeting based on whether and how the applicant has addressed all initial staff comments.

REPORT TO THE FARRAGUT MUNICIPAL PLANNING COMMISSION

PREPARED BY: Bart Hose, Assistant Community Development Director

SUBJECT: Discussion and public hearing on a final plat for the Ivey Farms Subdivision, Unit 1, Phase

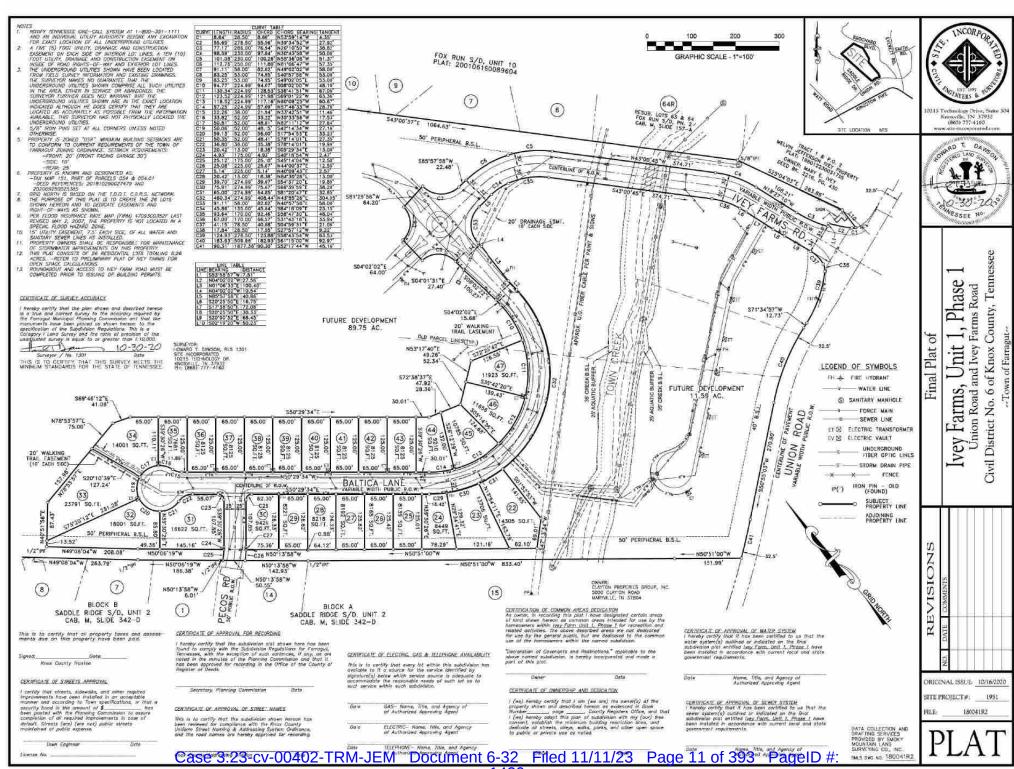

1, located on the north side of Union Road, Zoned R-1/OSR, 6.26 Acres, 26 Lots (SITE,

Incorporated, Applicant)

INTRODUCTION AND BACKGROUND: This item involves the final plat for Unit 1, Phase I of the Ivey Farms Subdivision located off Union Road. The plat includes 26 building lots, Baltica Lane, a connection/extension to Pecos Road, and the entranceway section of Ivey Farms Road from Union Road to the traffic circle within the development and Baltica Lane.

DISCUSSION: The developers of this subdivision will be required to complete construction of the traffic circle and entrance along Union Road before any building permits are issued. In addition, the connection to Pecos Road will not be opened until one of the following two things takes place: 1. the number of building permits issued in Phase I reaches 75% of the total buildable lots in that phase; or 2. the final plat for Phase 3 of the Ivey Farms Subdivision is recorded.

RECOMMENDATION: Included in your packet is the applicant's revised plat. Staff will make a recommendation at the meeting based on whether and how the applicant has addressed all initial staff comments.

REPORT TO THE FARRAGUT MUNICIPAL PLANNING COMMISSION

PREPARED BY: Bart Hose, Assistant Community Development Director

SUBJECT: Discussion and public hearing on a site plan for a parking lot addition at the St. Elizabeth's

Episcopal Church, 110 Sugarwood Drive, Zoned C-1, 4.54 Acres (Urban Engineering, Inc.,

Applicant)

INTRODUCTION AND BACKGROUND: This request involves a site plan for a parking lot addition at the St. Elizabeth's Episcopal Church. The addition includes 24 new parking spaces located near the church's entrance off Sugarwood Drive. The property is physically constrained with most of the parking to the north toward Kingston Pike. This project is intended to provide for some additional parking that would be closer to the church entrance.

RECOMMENDATION: Included in your packet is the applicant's revised site plan. Staff will make a recommendation at the meeting based on whether and how the applicant has addressed all initial staff comments.

REPORT TO THE FARRAGUT MUNICIPAL PLANNING COMMISSION

PREPARED BY: Bart Hose, Assistant Community Development Director

SUBJECT: Discussion and public hearing on a site plan for the property located at 13036 and 13038

Kingston Pike, Zoned C-1, 2 Acres (GBS Engineering, Applicant)

INTRODUCTION AND BACKGROUND: This request involves a site plan for the development of two (2) buildings located at 13036 and 13038 Kingston Pike. The site includes two (2) existing lots with shared access, parking, and internal circulation. The development also includes thru access to the Cool Sports development located immediately to the south, and provisions for cross-lot connectivity to the east and west.

RECOMMENDATION: Included in your packet is the applicant's revised site plan. Staff will make a recommendation at the meeting based on whether and how the applicant has addressed all initial staff comments.

- 66 CARETARY WASTE (3.5.16)
 PORTABLE SHATRAY PACULITIES WILL IS PROVIDED ON ALL CONSTRUCTION SITES. SANTARY WASTE WILL BE CLIFETED FROM THE SHATRAY STATE OF A TRIBLY MANABLE YET A LIBBORD WASTE WILL BE CLIFETED FROM THE SHATRAY WASTE.

 CONTRACTOR WALL OBTAIN ALL HICCESSARY PRIMITE TO DISPOSE OF SANTARY WASTE.

8.7 OTHER MATERIALS THE FOLLOWING MATERIALS OR SUBSTANCES ARE EXPECTED TO BE PRESENT ON THE STE DURING THE CONDITIUDITION PERIOD (CHECK ALL THAT APPLY).

PERTURPER AND UNC PESTICIDES ANOIGN HERBICIDES DIESEL AND GASCLINE MACHINERY LUBRICANTS (OLL AND GREASE)

THESE MATERIALS WILL BE HANDLED AS NOTED IN THIS SWPPP.

W. NON STORMWATER DISCHARGES (3.5.8)

- 91 THE FOLLOWING NON-STORMWATER CISCHARGES ARE ANTICIPATED DURING THE CONSTRUCTION OF THIS PROJECT (CHECK ALL THAT APPLY)
- DEWATERING OF WORK AREAS OF COLLECTED STORMMATER AND GROUND WATER.
- WATERS USED TO WASH VEHICELS (OF DUST AND SOX), WHERE DETERMENTS ARE NOT USED AND DETERMINE AND OF PILITHING IS PROVIDED REPORT THE WATER LEAVES THE SITE.
- WATERS USED TO CONTROL DUST (\$5.5.1/1)
- POTABLE WATER SQURGES, INCLUDING WATERLINE FLISHING FROM WHICH CILCRINE HAS BEEN REMOVED TO THE MAXIMUM EXTENT PRACTICABLE.
- LINCONTAMBIATED GROUNDWATER OR SPRING WATER.
- FOUNDATION OR FOOTING DRAINS WHERE FLOWS ARE NOT CONTAMINATED WITH POLLUTANTS.
- 92 ALL ALLOWING NON-STOKKNINTER DISCHARGES WILL BE DIRECTED TO STABLE DISCHARGE STRUCTURES PRIOR TO LEAVING THE SITE FILTERING OR CHEMICAL TREATMENT MAY BE RECESSED YPOPROT DO DECARGE ALLOWING. TREATMENTS MUST BE APPLIED PER THE TORE BROSIDE AND SERMENT CONTROL HANDROOK.
- 63 THE DESIGN OF ALL IMPACTED EPSO MEASURES RECEIVING FLOW FROM ALLOWAL NOW-ETGRAWATER DISCHARGES MAINT DE DESKINGO TO HANDLE THE VOLUME OF NOW-ETGRAWATER COMPONENT.
- 94 WARH DOWN OR WARTE DISCHARGE OF CONCRETE TRUCKS WILL NOT BE PERMITTED ON SITE MALESS PROPER SETTLEMENT AREAS HAVE BEEN PROVIDED IN ACCORDANCE WITH BOTH STATE AND FEDERS, REQULATIONS.
- 9.5 ARE MY DISCHARGES ASSOCIATED WITH INDUSTRIAL (HOX-CONSTRUCTION STORMWATER) ACTIVITY EXPECTED (3.9 LUF)
 - YES | NO III
- IF YES, SPECIFY THE LOCATION OF THE ACTIVITY AND ITS PERMIT NUMBER:

10. EPILL PREVENTION, MANAGEMENT AND NOTIFICATION (1.5.5.c. 5.1)

- - 18.1.1 CONTRACTORS BLUK FUEL AND PETROLEJA PRODUCTS STORED ON SITE IN ABOVE GROWND STORAGE TANKS WITH AGGREGATED STORAGE CAPACITY IN EXCESS OF 1,220 CALLONS SHALL HAVE SECONDARY COOKTANDENT.
 - 10.1.2. THE CONTRACTOR SHALL BE RESPONSIBLE FOR PREPARING A SPILL PREVENTION CONTROL AND COUNTERMEASURE (SPICE) PLAN AS REQUIRED BY LAW.

TO J MATERIAL MANAGEMENT

CALLY HEEDED PRODUCTS WILL BE STORED ON BITE BY THE DOWNSHITTON, EXCEPT FOR BULK MATERIALS, THE CONTRIVEND WILL STORE ALL MATERIALS INCREDICTORS AND IN MATERIALS. THE CONTRIVEND WILL STORE ALL MATERIALS INCREDICTORS AND IN MATERIALS. AND IN CONTRIVEND WILL STORE ALL STORES AND INCREDICTORS AND

THESE, HASHIDOUS MATERIALS.

PRODUCTION WILL BE KETT IN DISSIPAL, CONTAINERS SHE CONTAINERS IS NOT RECEIVABLE OF ORIGINAL LOBELS AND MITTERS AFEETY DAY A HIGHTS WILL BE RETAINED IN A BATHER HAD DEAL MITTERS AND THE CONTROL OF SHEAR SHE CONTROL OF SHEAR SHEAR SHE CONTROL OF SHEAR SHEAR SHE CONTROL OF SHEAR SHEAR

VILLI PRODUCT SPECIFIC PRACTICES

- (0.1) PETROLEUM PRODUCTS ALL ON-STE VEHICLES WILL BE MONTONED FOR LEAKS AND RECEIVE RESULTAR PREVENTIVE MANTEMANCE TO REDUCE THE CHANCE OF LEAKAGE. PETROLEUM PRODUCTS WILL BE STOPED IN TIGHTLY SEALED CONTAINERS, WHICH ARE CLEARLY LABILED.
- 1032 FERTILIZERS FERTILIZERS WILL BE APPLIED ONLY IN THE ANOUNTS SPECIFIED BY THE SON, ANALYSIS: ONCE APPLIED, FERTILIZERS WILL BE WORKED INTO THE SOO, TO LIMIT THE EXPOSURE TO STORMWATER, FIRSTILIZERS WILL BE STORED IN AN EXCLOSED WISH DISTRICT. DOVING THE CONTENTS OF PARTIALLY USED PERTILIZER BAGS WILL BE TRANSFERRED TO SEALABLE CONTAINERS TO AVOID SPILLS:
- 103.3. MINTE ALL CONTAINERS WILL BE TIGHTLY SEALED AND STORED WHEN NOT REQUIRED FOR USE. THE EXCESS WILL BE DISPOSED OF PIRETHE MANUFACTURER'S INSTRUCTIONS AND APPLICABLE STATE AND LOCAL RESULPTIONS.
- 10.3.4. CONCRETE TRUCKE CONTRACTORS WILL PROVICE DESIGNATED TRUST WASHOUT AREAS ON THE SITE. THESE AREAS MUTE BE SELF CONTAINED AND NOT CONNECTED TO ANY STORMWATER OUTLET OF THE SITE. UPON COMPLETION OF CONSTRUCTION WASHOUT AREAS WILL BE PROPERLY STRAILZED.

10.4 (PILL MANAGEMENT

ADDITION TO THE PREMIOUS HOUSEKEEPING AND MANAGEMENT PRACTICES. THE FOLLOWING PACTICES WILL BE FOLLOWED FOR SPILL PREVENTION AND GLEANUP IT NECESSARY.

- 10.4.1. FOR ALL HAZARDOUS MATERIALS STORED ON SITE. THE MANUFACTURE'S RECOMMENCED METHODS FOR SPILL CLEANS WHILE BE CLEARLY PROTED: SITE RESSOURCE, WILL SE MADE ANARE OF THE PROCEDURES AND THE LOCATIONS OF THE INFORMATION AND CLEANUF SITES.
- 18.4.2. APPROPRIATE CLEANUP MATERIALS AND SOUPMENT WILL BE MAINTAINED BY THE CONTRACTOR IN THE MATERIALS STOTAGE AREA ON DITE AND LINDER COVER. AS APPROPRIATE EQUIPMENT AND MATERIALS BY ROLLOGE TELES SOUTH AS ECONIO, OUTST PANS MORS RADGE COVER DOGGLES, WITTY LITTLE AND MATERIAL THAT PLASTICE AND METAL TRACH CONTRIBUES REPORTICULATE OF CLEANUP PURPOSED.
- 10.4.3. ALL SPILLS VALUE CLEANED IMMEDIATELY AFTER DISCOVERY AND THE MATERIALS CIGNOSSIS OF PROPIENCY. THE SPILL AREA WILL BE KEPT WELL VENTILATED AND PERSON WILL WEAR APPRIORIATE PROTECTIVE CLOTHING TO PREVENT MARRY FROM CONTACT A HAZARDOVIE SUBSTRACE.

REPORT TO THE FARRAGUT MUNICIPAL PLANNING COMMISSION

PREPARED BY: Bart Hose, Assistant Community Development Director

SUBJECT: Discussion and public hearing on a concept plan for the Meadows on McFee, 933 and 1013

McFee Road, Zoned R-1/OSR, 32 Acres, 59 Lots (Homestead Land Holdings, LLC,

Applicant)

INTRODUCTION AND BACKGROUND: This request involves a concept plan for the proposed Meadows on McFee Subdivision. The property in question includes the former Gibson Farm property and a portion of the Velma Seal property. The Gibson Farm portion of the property was rezoned by the Board of Mayor and Aldermen last month. The Board is considering the same R-1/OSR zoning for the Seal property area this month.

DISCUSSION: The proposed subdivision includes 59 building lots, a main loop street configuration with two (2) access points along McFee Road, and open-space areas. The proposed internal street/transportation system also includes both street and walking trail connections to the properties located to the north and south of the project.

RECOMMENDATION: Included in your packet is the applicant's revised concept plan. Staff will make a recommendation at the meeting based on whether and how the applicant has addressed all initial staff comments. Any approval will need to be made subject to the final rezoning of the Seal property noted above.

REPORT TO THE FARRAGUT MUNICIPAL PLANNING COMMISSION

PREPARED BY: Mark Shipley, Community Development Director

SUBJECT: Discussion and public hearing on a request to amend Appendix A - Zoning, Chapter 3.,

Specific District Regulations, Section XII., General Commercial District (C-1), B., 3., as it relates to the outdoor display and or storage of general farm implements and lawn care equipment, riding lawn mowers, and related accessories (Farragut Lawn and Tractor,

Applicant)

INTRODUCTION AND BACKGROUND: This item was discussed last month and is related to provisions in the Farragut Zoning Ordinance that address outdoor display and storage of general farm implements and lawn care equipment, riding lawn mowers, and related accessories. Staff reviewed the current provisions which were specifically created for this type of use. Essentially, the current provisions limit display to a permanent covered porch that extends from the front of the building toward Kingston Pike.

DISCUSSION: As staff noted in the review of this item, the issue has been that the property owner has not been adhering to the current provisions and has recently been cited to municipal court and found liable for violating these provisions. Consequently, the property owner petitioned for the existing language to be re-visited. After reviewing this with the Commission in October, staff was asked to meet with the property owner on site and look at where equipment could be displayed beyond the limits of the current provisions so that the setbacks could be established in the text amendment.

On November 5, staff visited Farragut Lawn and Tractor. After discussing different options, staff is proposing in Ordinance 20-25 that the outdoor storage and/or display of implements and/or equipment shall be situated so that such storage or display is at least 20 feet from the front property line. It will be the responsibility of the property owner to coordinate with Town staff on identifying and marking the 20-foot setback line for clarity and compliance purposes.

The rationale for the 20-foot setback is that this is the same minimum setback for parking lots. So, equipment being stored or displayed would be in the same general location in relation to the abutting street as cars parked in a parking lot. This setback line will have to be identified and marked in consultation with the Town staff so that compliance with the amended provisions can be easily assessed.

As discussed in October, no equipment shall be permitted at any time on sidewalks or accessways and all signage shall comply with the Farragut Sign Ordinance.

RECOMMENDATION: Included in your packet is Resolution PC-20-17 which recommends approval of Ordinance 20-25.

RESOLUTION PC-20-17

FARRAGUT MUNICIPAL PLANNING COMMISSION

A RESOLUTION TO AMEND THE TEXT OF THE FARRAGUT ZONING ORDINANCE, ORDINANCE 86-16, AS AMENDED, PURSUANT TO AUTHORITY GRANTED BY SECTION 13-4-201, TENNESSEE CODE ANNOTATED, BY AMENDING THE FARRAGUT MUNICIPAL CODE, APPENDIX A., ZONING, CHAPTER 3., SPECIFIC DISTRICT REGULATIONS, SECTION XII., GENERAL COMMERCIAL DISTRICT (C-1), B., 3., AS IT RELATES TO THE OUTDOOR DISPLAY AND OR STORAGE OF GENERAL FARM IMPLEMENTS AND LAWN CARE EQUIPMENT, RIDING LAWN MOWERS, AND RELATED ACCESSORIES

WHEREAS, the <u>Tennessee Code Annotated</u>, Section 13-4-201et seq, provides that the Municipal Planning Commission shall make and adopt a general plan for the physical development of the municipality; and

WHEREAS, the Farragut Municipal Planning Commission has adopted various elements of a zoning plan as an element of the general plan for physical development; and

WHEREAS, a public hearing was held on this request on November 19, 2020;

NOW, THEREFORE, BE IT RESOLVED that the Farragut Municipal Planning Commission hereby recommends approval to the Farragut Board of Mayor and Aldermen of an ordinance, amending Ordinance 86-16, of the Farragut Zoning Ordinance, by adding Ordinance 20-25.

ADOPTED this 19th day of November 2020.

AN ORDINANCE TO AMEND THE TEXT OF THE FARRAGUT ZONING ORDINANCE, ORDINANCE 86-16, AS AMENDED, PURSUANT TO AUTHORITY GRANTED BY SECTION 13-4-201, TENNESSEE CODE ANNOTATED, BY AMENDING THE <u>FARRAGUT MUNICIPAL CODE</u>, APPENDIX A., ZONING, CHAPTER 3., SECTION XII. B., 3., RETAIL OUTLETS FOR THE SALE OF GENERAL FARM IMPLEMENTS AND LAWN CARE EQUIPMENT SUCH AS TRACTORS (LESS THAN 10,000 POUNDS), RIDING LAWN MOWERS, AND RELATED ACCESSORIES

WHEREAS, the Board of Mayor and Aldermen of the Town of Farragut, Tennessee, wishes to amend Chapter 3., Section XII. B., 3., Retail outlets for the sale of general farm implements and lawn care equipment such as tractors (less than 10,000 pounds), riding lawn mowers, and related accessories, of the Farragut Zoning Ordinance, Ordinance 86-16,

NOW, THEREFORE, BE IT ORDAINED by the Board of Mayor and Aldermen of the Town of Farragut, Tennessee, that the Farragut Zoning Ordinance is hereby amended by replacing it in its entirety as follows:

SECTION 1.

Section XII. B., 3., Retail outlets for the sale of general farm implements and lawn care equipment such as tractors (less than 10,000 pounds), riding lawn mowers, and related accessories.

- Retail outlets for the sale of general farm implements and lawn care equipment such as tractors (less than 10,000 pounds), riding lawn mowers, and related accessories.
 - a. The outdoor display and/or storage of such implements and equipment shall be permitted provided the following development criteria are met:
 - (1) The outdoor storage and/or display of the implements and/or equipment shall be situated so that it is at least 20 feet from the front property line. It is the responsibility of the property owner to coordinate with Town staff on identifying and marking the 20-foot setback line for clarity and compliance purposes;
 - (2) The equipment and/or implements to be stored and/or displayed outdoors must be removed from the crate or cartons and displayed and/or stored in such a way as to allow for viewing and inspection, but so as not to prevent passage on sidewalks, walkways, or other vehicle ways;
 - (3) Such businesses necessarily involve the use of outdoor areas on the premises for the unloading, uncrating, positioning and repositioning of items that are often

- larger and more cumbersome than most retailers handle. The temporary use of outdoor areas of the premises for such purposes during hours of operation shall not be a violation of this ordinance; and
- (4) Such businesses necessarily utilize packaging that is to be destroyed or reused. Such packaging materials shall be stored in areas on the premises to which access shall be restricted by means of a physical barrier such as an opaque fence or similar to a dumpster enclosure and shall comply with Chapter 4, Section I.B. of this ordinance.

SECTION 2.

| This ordinance shall take effect from and after its final passage and publication, the public relfare requiring it. |

FARRAGUT MUNICIPAL PLANNING COMMISSION

Sec. XII. - General commercial district (C-1).

- A. General description. This district provides space for commercial uses which provide services primarily to community residents of the Town of Farragut. The intent is to permit lands adjacent to major arterial highways as designated by the Farragut Major Road Plan to be used for the provision of general commercial and business services to the community. These commercial uses are intended to be designed to minimize disruption of traffic flows and negative impacts on adjacent residential uses.
- B. Permitted principal and accessory uses and structures (Non-Mixed Use Town Center as identified in the Comprehensive Land Use Plan). Unless provided for elsewhere in this section, property and structures located in the General Commercial District (C-1) shall be used only for the following purposes:
 - Generally recognized retail sales. This excludes flea markets and the sale of automobiles and the sale and/or rental of boats, trucks, trailers, construction equipment, mobile homes, and other similar uses as determined by the Board of Zoning Appeals.

The outdoor sale and/or storage of merchandise and/or any other materials shall be permitted provided the following development criteria are met:

- Such merchandise and/or materials are displayed or stored in a permanent area designed for such use;
- Such merchandise and/or materials are not displayed or stored on any sidewalks, walkways, parking spaces, or other vehicle ways;
- c. Required yard setbacks for buildings are met for the storage/display area;
- Access to the display/storage area shall be restricted by means of a physical barrier such as a fence, a berm, landscaping, or other similar means; and
- e. The total area reserved for outdoor display/storage shall not exceed 2,000 square feet if the net indoor retail floor area is greater than 25,000 square feet, and it shall not exceed 1,000 square feet if the net indoor retail floor area is less than 25,000 square feet.
- 2. The retail sale of alcoholic beverages, as provided for in the Farragut Municipal Code.
- Retail outlets for the sale of general farm implements and lawn care equipment such as tractors (less than 10,000 pounds), riding lawn mowers, and related accessories.
 - a. The outdoor display and/or storage of such implements and equipments-shall be permitted provided the following development criteria are met:
 - (1) The outdoor storage and/or display of the implements and/or equipment shall be situated so that it is at least 20 feet from the front property line. It is the responsibility of the property owner to coordinate with Town staff on identifying and marking the 20-foot setback line for clarity and compliance purposes. It behind a straight line running from side lot line to side lot line that coincides with the rear wall of the principal building located on the property;
 - (2) The equipment and/or implements to be stored and/or displayed outdoors must be removed from the crate or cartons and displayed and/or stored in such a way as to allow for viewing and inspection, but so as not to prevent passage on sidewalks, walkways, or other vehicle ways;
 - (3) Such businesses necessarily involve the use of outdoor areas on the premises for the unloading, uncrating, positioning and repositioning of items that are often larger and more cumbersome than most retailers handle. The temporary use of outdoor areas of the premises for such purposes during hours of operation shall not be a violation of this ordinance; and

- (4) Such businesses necessarily utilize packaging that is to be destroyed or reused. Such packaging materials shall be stored in areas on the premises to which access shall be restricted by means of a physical barrier such as an opaque fence or similar to a dumpster enclosure and shall comply with Chapter 4, Section I.B. of this ordinance.
- b. The outdoor display of merchandise, except as provided for above, is permitted provided such merchandise is displayed in a permanent, covered porch. Such covered porch shall be attached to the principal building and shall meet all setback requirements of the principal building.
- Financial and real estate services.
- 5. Professional, personal, and business services.
- Restaurants, tea rooms, cafes, coffee houses, or other similar establishments serving food or beverage that is primarily consumed within the principal building or in designated outdoor seating areas associated with the principal building.

Coffee houses with drive-through service lanes that serve as the principal means for service. The principal location for consumption is offsite.

- Automotive services, provided such services are for automobiles and light trucks only. Such services may include fuel sales and repairs. Facilities designed to accommodate the refueling and/or servicing of trucks with more than three axles or more than ten wheels are prohibited.
- 8. Retail rental and leasing of automobiles provided the following development criteria are met:
 - a. Such business is located in a freestanding building; and
 - b. If the premises are fenced, such fencing shall be decorative, shall not exceed three feet in height, and shall be of such design so as not to prevent the ability to see through the fence.
- 9. Public, governmental, and general offices.
- Medical, dental, and veterinary facilities.
- Medical spas.
- Commercial kennels, provided the following development criteria are met:
 - Any outdoor structures (e.g., fences) associated with the kennel shall not be visible from public streets;
 - Boarding of animals shall be confined to the interior of a structure designated for this purpose;
 - c. Outdoor fences are permitted solely to provide an area for exercise and waste elimination and shall be used only with on-site supervision. Outdoor fences shall adhere to the following specifications:
 - Opaque with no openings as viewed from the outside of the fence and a minimum of six feet in height;
 - Properly maintained and constructed of durable, low maintenance materials that are earth tone, black, or white in color and contain no signage. No chain link fencing shall be permitted;
 - Set back at least 50 feet from an adjacent property that is not zoned residential or agriculture. Such measurement shall be a straight line distance from the nearest portion of the fence to the nearest portion of the property that is not zoned residential or agriculture;
 - Set back at least 250 feet from an adjacent property that is zoned residential or agriculture. Such measurement shall be a straight line distance from the nearest

REPORT TO THE FARRAGUT MUNICIPAL PLANNING COMMISSION

PREPARED BY: Bart Hose, Assistant Community Development Director

SUBJECT: Discussion on a rezoning of property situated around the eastern intersection of McFee

Road and Boyd Station Road, Parcels 50, 50.01, 54.01, and 9.01, Tax Map 162, 12611 Boyd Station Road, from General Single-Family Residential (R-2) to Open Space Mixed Residential Overlay (R-1/OSMR), 131.25 Acres (OBO Homestead Land Holdings,

Applicant)

INTRODUCTION AND BACKGROUND: This rezoning request involves four separate tracts totaling 131.25 acres. The property stretches from McFee Road to Virtue Road and includes approximately 3000 linear feet of frontage along Boyd Station Road. The property also has access to McFee Road located at the southernmost traffic circle and via a small strip of land south of the circle, and to Virtue Road via the easternmost lot in question and a narrow strip of land (see Exhibit 1).

DISCUSSION: The property in question is currently agricultural and open in nature. It is primarily open fields, fence rows, and includes a small cluster of agricultural buildings. The easternmost lot is a narrow, tree covered vacant/open-space area, that is impacted by a transmission line easement and has limited frontage on Virtue Rd. The property also appears to contain several potential sinkhole areas that could impact development.

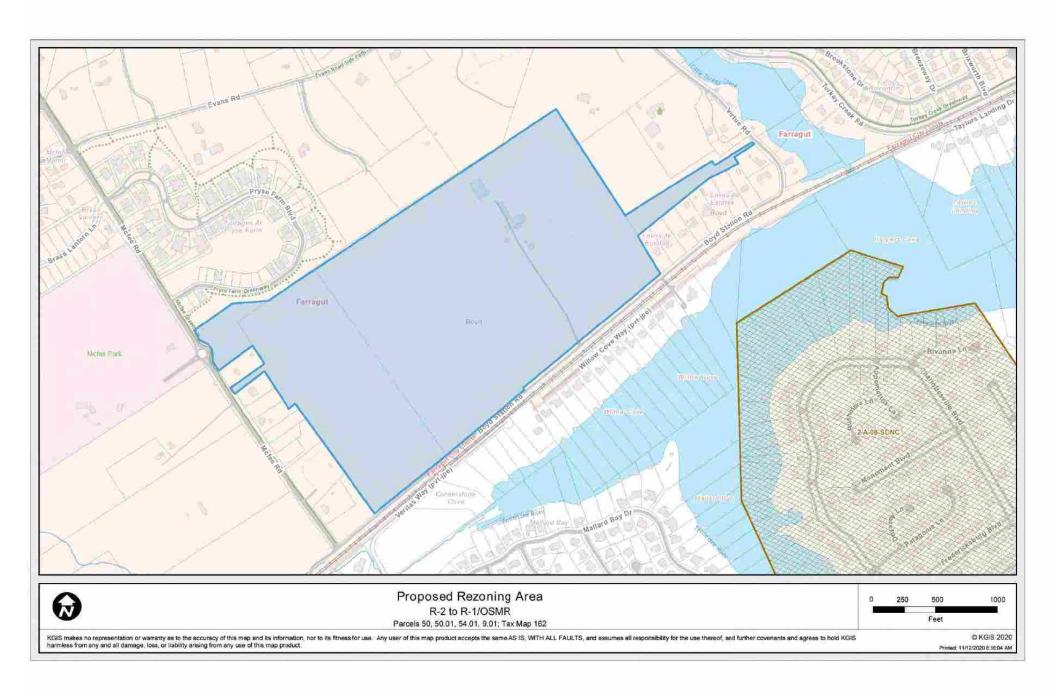

Existing land use in the area immediately around the property is largely low density residential in nature with a mix of open areas, larger residential lots and tracts, and a few public/semi-public uses. The existing Pryse Farm development is an exception to this pattern and is located immediately to the northwest of the subject property. This development can be characterized as a lower density attached single-family residential development (roughly 2.17 units per acre). The surrounding area is also experiencing development pressure and two single-family subdivisions are either under development or under review within the Town. This includes the Brass Lantern development and the Meadows on McFee development. Additional development also continues to occur south of the Town in the Choto area of Knox County (see Exhibit 2).

As noted above, the property has considerable frontage along Boyd Station Road and additional usable access to McFee Road. Access to Virtue Road is limited and likely only suitable for a pedestrian/bicycle trail connection point. McFee Road is classified as a Minor Arterial on the Town's Major Road Plan. Boyd Station Road is classified as a Major Collector and does not currently meet the Town's minimum improvement standards for a roadway of this classification. As such, it would need to be improved to the adopted complete streets cross-section in conjunction with any significant development of the property. Adequate utility services would also need to be provided to support any proposed development and existing utility mains are present in the surrounding area.

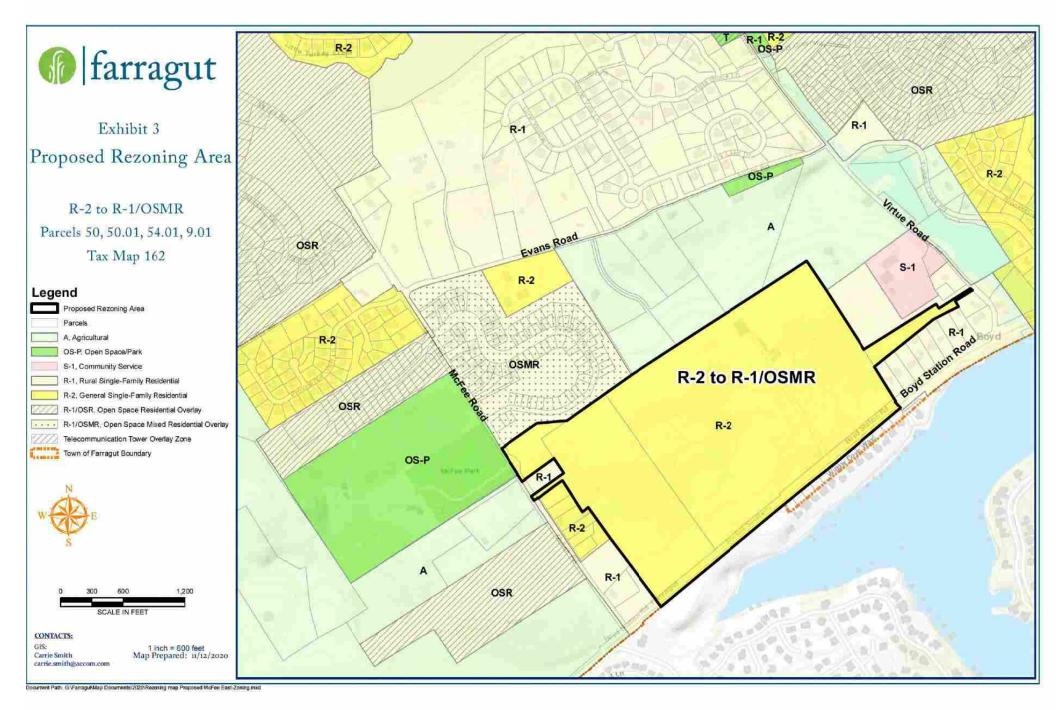

The property in question is currently zoned General Single-Family Residential (R-2) and the applicant is requesting Open Space Mixed Residential Overlay (R-1/OSMR). The Town's Future Land Use Map

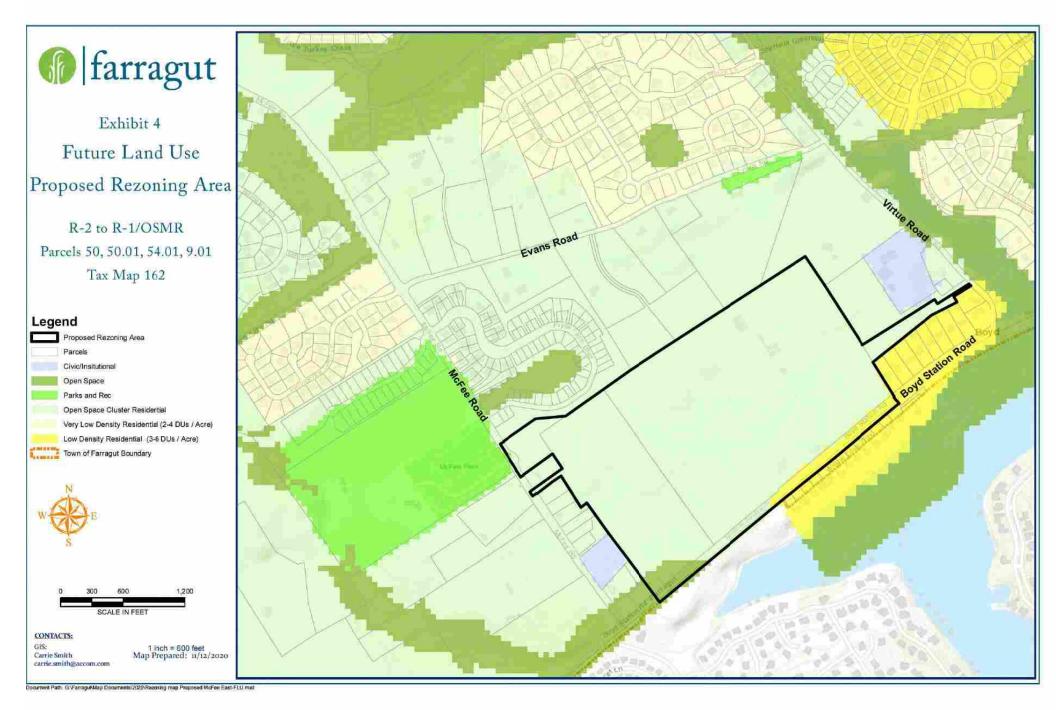

identifies the area for Open Space Cluster Residential type development. The proposed zoning (R-1/OSMR) would be consistent with this land use designation. The mixed residential aspect of the requested zoning would also be consistent with the Pryse Farm development which is similarly zoned and may allow the owner/developer more flexibility in dealing with potential sinkholes and other design considerations. The mixed residential designation is, however, somewhat less consistent with the existing large lot single-family development that adjoins the property in several locations, and a recent rezoning application for OSMR on the west side of McFee Road was not approved. Given the size of the property in question, careful design could create separation and buffers between these existing homesites and any new mixed residential development (see Exhibits 3 & 4).

Finally, it should be noted that the property in question is currently divided into four lots/tracts. Two of these lots do not meet the 5-acre minimum area threshold for OSMR zoning and will need to be combined with the other tracts. This includes a smaller lot that adjoins the traffic circle on McFee Road and the narrow tract at the eastern end of the property that adjoins Virtue Road. These lots also provide important transportation access points for the future development of the general area. Any rezoning action should be made contingent upon these lots being formally combined with the larger tracts.

REPORT TO THE FARRAGUT MUNICIPAL PLANNING COMMISSION

PREPARED BY: Mark Shipley, Community Development Director

SUBJECT: Discussion and public hearing on a request to amend the future land use map in the

Comprehensive Land Use Plan Update for a portion of Parcel 003.19, Tax Map 143 (a portion of the property referenced as 133 Concord Road) associated with the Farragut Town Center at Biddle Farms project from Medium Density Residential to Town Center

(CHM, LLC, Applicant)

INTRODUCTION AND BACKGROUND: This agenda item involves a project, the Town Center at Biddle Farms, that has been discussed at a number of Planning Commission and Staff/Developer meetings since March 2020. As conditionally approved through a master concept plan in July, the project would include a Town Center commercial area on the north portion of the property and transition to a multifamily residential development on the southern portion of the property with a large lawn gathering space between the two and a linear park area with a greenway loop on the eastern portion of the development along the floodplain. Collectively, this will be a Planned Commercial Development that will also involve a requested amendment to the Zoning Map.

DISCUSSION: In terms of the future land use map, most of the development proposed for the Town Center at Biddle Farms is shown in an area that is designated as Mixed-Use Town Center. A small area in the southeast portion of the development where some improvements associated with the project are planned is shown as Medium Density Residential. For consistency purposes, the applicant is requesting the area shown as Medium Density Residential be amended to Mixed Use Town Center.

One clarification to note regarding the lines shown on the future land use map is that, unlike a line on a zoning map which typically follows property lines or can be dimensioned and tied to a specific location, the lines on the future land use map are only intended to generally define areas for purposes of demonstrating a certain development vision. Thus, the lines on the future land use map may appear irregular and do not necessarily follow property lines.

In the case of the area envisioned as the Mixed Use Town Center on the future land use, the Board of Mayor and Aldermen has adopted by ordinance both the map and text portion of this particular land use designation because of its importance in encouraging the realization of Strategy 1 in the Comprehensive Land Use Plan Update which is to "Bring About a Downtown."

RECOMMENDATION: Included in your packet is Resolution PC-20-18 which recommends approval of the requested amendment to the future land use map through Ordinance 20-26. In relation to the Eight Key Strategies identified in the Comprehensive Land Use Plan Update, changing the future land use as provided for in Resolution PC-20-18 would help facilitate a project that would address the following:

 Bringing About a Downtown (the project would create a main street with many components consistent with a downtown);

- Repairing Aging Shopping Centers (the project would result in the removal of the old Kroger building and the creation of a new development with a town center street grid with building placement and streetscaping that encourage pedestrian activity, a large central gathering space for community events, a linear park, and improvements to outdated infrastructure);
- Encouraging Greater Housing Choice (the project would provide for housing in a density, form, and location that would help support the downtown and create a more dynamic and active town center area);
- 4. Increasing Connectivity (the project includes numerous connections, both vehicular and pedestrian, that tie the project together internally and externally);
- Enhancing our Identity (the project would create a unique type of development that would focus on activated spaces and pedestrian engagement along with provisions for public gatherings and community events); and
- Planning for the Remaining Vacant Parcels (the project not only repairs an existing aging shopping
 center and infrastructure but it also addresses abutting areas and incorporates them into the project
 to help sustain the project and create an area that will be identified as downtown Farragut).

For these reasons, staff recommends approval of Resolution PC-20-18.

RESOLUTION PC-20-18

FARRAGUT MUNICIPAL PLANNING COMMISSION

A RESOLUTION TO APPROVE AMENDMENTS TO THE FUTURE LAND USE MAP OF THE COMPREHENSIVE LAND USE PLAN UPDATE DECEMBER 2012 FOR A PORTION OF PARCEL 003.19, TAX MAP 143 (A PORTION OF THE PROPERTY REFERENCED AS 133 CONCORD ROAD) ASSOCIATED WITH THE FARRAGUT TOWN CENTER AT BIDDLE FARMS PROJECT FROM MEDIUM DENSITY RESIDENTIAL TO MIXED USE TOWN CENTER

WHEREAS, the <u>Tennessee Code Annotated</u>, Section 13-4-201et seq, provides that the Municipal Planning Commission shall make and adopt a general plan for the physical development of the municipality; and

WHEREAS, the Farragut Municipal Planning Commission has adopted the Comprehensive Land Use Plan Update on December 12, 2012; and

WHEREAS, the Farragut Municipal Planning Commission may periodically amend various aspects of the Comprehensive Land Use Plan Update;

NOW, THEREFORE, BE IT RESOLVED that the Farragut Municipal Planning Commission hereby recommends, through Resolution PC-20-18, approval of Ordinance 20-26 to amend the Future Land Use Map of the Comprehensive Land Use Plan.

ADOPTED this 19th day of November 2020.

AN ORDINANCE TO AMEND THE FUTURE LAND USE MAP OF THE COMPREHENSIVE LAND USE PLAN UPDATE FOR A PORTION OF PARCEL 003.19, TAX MAP 143 (A PORTION OF THE PROPERTY REFERENCED AS 133 CONCORD ROAD)

WHEREAS, the Board of Mayor and Aldermen of the Town of Farragut, Tennessee, through the Farragut Municipal Planning Commission, created and adopted the Farragut Comprehensive Land Use Plan Update and Future Land Use Map; and,

WHEREAS, the <u>Tennessee Code Annotated</u>, Section 13-4-201 et seq, provides that the Municipal Planning Commission shall make and adopt a general plan for the physical development of the municipality; and

WHEREAS, the Farragut Municipal Planning Commission adopted the Farragut Comprehensive Land Use Plan Update and Future Land Use Map by Resolution PC-12-18 on December 20, 2012; and

WHEREAS, the <u>Tennessee Code Annotated</u>, Section 13-4-202 et seq, provides that the Municipal Planning Commission and the chief legislative body may adopt parts of the Comprehensive Land Use Plan Update that correspond generally with one (1) or more of the functional subdivisions of the subject matter of the plan; and

WHEREAS, the Board of Mayor and Alderman of the Town of Farragut has adopted the Mixed-Use Town Center portion of the Future Land Use Map of the Farragut Comprehensive Land Use Plan Update; and

WHEREAS, the Board of Mayor and Alderman of the Town of Farragut may periodically amend the map of the Mixed-Use Town Center Land Use of the Farragut Comprehensive Land Use Plan Update;

NOW, THEREFORE, BE IT ORDAINED by the Board of Mayor and Aldermen of the Town of Farragut that the Future Land Use Map in the Comprehensive Land Use Plan Update is amended as follows:

SECTION 1.

Changing the property referenced as a portion of Parcel 003.19, Tax Map 143 (a portion of the property referenced as 133 Concord Road) from what is currently shown as Medium Density Residential on the Future Land Use Map to Mixed Use Town Center (see Exhibit A).

REPORT TO THE FARRAGUT MUNICIPAL PLANNING COMMISSION

PREPARED BY: Mark Shipley, Community Development Director

SUBJECT: Discussion and public hearing on a request to amend the Farragut Zoning Map in

association with the Farragut Town Center at Biddle Farms project, 11230 and 11240 Kingston Pike and 133 Concord Road, Parcels 3.02, 3.03, 3.10, and a portion of 3.19, Tax Map 143, from General Commercial (C-1) and General Single-Family Residential (R-2) to

Planned Commercial Development (PCD), 43.63 Acres (CHM, LLC, Applicant)

INTRODUCTION AND BACKGROUND: Related to the previous agenda item, the applicant pursuing the Town Center at Biddle Farms project is requesting a zoning map amendment that would establish the Planned Commercial Development District (PCD) as the zoning district for their planned mixed-use project. Having more than one zoning district can create confusion in terms of what regulations apply and, since this is a planned commercial/residential project, the PCD is the logical choice.

As shown as part of Ordinance 20-27, a small portion of the project is currently zoned PCD. However, most of the project is zoned General Commercial (C-1) with the southeast end of the project, which does not include any proposed buildings, zoned General Single-Family Residential (R-2).

DISCUSSION: After a lengthy discussion at the staff/developer meeting on August 4, the general consensus that emerged was that the Town Center at Biddle Farms project, with its unique characteristics and surrounding plan of development, would be a good candidate for a Planned Commercial Development, especially given that a concept plan has already been presented and conditionally approved. The idea of using the PCD for this project was presented to the Planning Commission at their meeting on August 20 and was favorably received.

Since that time, the applicant has been working on putting together the information required for a rezoning request for the PCD District. Based on the information submitted, the applicant will be requesting some text amendments that will be considered at the December meeting. The project components that would involve requested text amendments were discussed in general terms with the Planning Commission at their July 16 meeting. The text amendment application was not submitted at that time because the applicant was still working through the details of their project to determine what, if any, amendments may need to be requested.

For purposes of this agenda item, staff would note that a rezoning to PCD would permit the applicant to develop under the existing language. The applicant understands that if future text amendments are not approved the project will need to be amended to comply with the established provisions.

RECOMMENDATION: Since the master concept plan that was submitted with this rezoning and that was conditionally approved by the Planning Commission in July will require text amendments, staff recommends that any approval of the rezoning will be conditioned upon the understanding that when the more detailed site and landscape plans are submitted, such plans shall be in compliance with all applicable regulations in place at that time.

Included in the packet is the applicant's revised rezoning package. This includes the Traffic Impact Study and a third-party review of the study. Staff will review the information provided and update the Commission at the meeting.

As noted in the previous item, in relation to the Eight Key Strategies identified in the Comprehensive Land Use Plan Update, changing the zoning map as provided for in Resolution PC-20-19 would help facilitate a project that would address the following:

- 1. Bringing About a Downtown (the project would create a main street with many components consistent with a downtown);
- Repairing Aging Shopping Centers (the project would result in the removal of the old Kroger building and the creation of a new development with a town center street grid with building placement and streetscaping that encourage pedestrian activity, a large central gathering space for community events, a linear park, and improvements to outdated infrastructure);
- Encouraging Greater Housing Choice (the project would provide for housing in a density, form, and location that would help support the downtown and create a more dynamic and active town center area);
- Increasing Connectivity (the project includes numerous connections, both vehicular and pedestrian, that tie the project together internally and externally);
- Enhancing our Identity (the project would create a unique type of development that would focus
 on activated spaces and pedestrian engagement along with provisions for public gatherings and
 community events); and
- Planning for the Remaining Vacant Parcels (the project not only repairs an existing aging shopping
 center and infrastructure but it also addresses abutting areas and incorporates them into the project
 to help sustain the project and create an area that will be identified as downtown Farragut).

Resolution PC-20-19 recommends approval of Ordinance 20-27 which would rezone all of the property to be included in the Town Center at Biddle Farms mixed use project as PCD.

RESOLUTION PC-20-19

FARRAGUT MUNICIPAL PLANNING COMMISSION

A RESOLUTION TO APPROVE AN AMENDMENT TO THE FARRAGUT ZONING MAP, ORDINANCE 86-16, TO RECOMMEND THE APPROVAL OF THE REZONING OF THE PROPERTY AT 11230 AND 11240 KINGSTON PIKE AND 133 CONCORD ROAD, PARCELS 3.02, 3.03, 3.10, AND A PORTION OF 3.19, TAX MAP 143, FROM GENERAL COMMERCIAL (C-1) AND GENERAL SINGLE-FAMILY RESIDENTIAL (R-2) TO PLANNED COMMERCIAL DEVELOPMENT (PCD)

WHEREAS, the <u>Tennessee Code Annotated</u>, Section 13-4-201et seq, provides that the Municipal Planning Commission shall make and adopt a general plan for the physical development of the municipality; and

WHEREAS, the Farragut Municipal Planning Commission has adopted various elements of a zoning plan as an element of the general plan for physical development; and

WHEREAS, a public hearing was held on this request on November 19, 2020;

NOW, THEREFORE, BE IT RESOLVED that the Farragut Municipal Planning Commission hereby recommends approval of Ordinance 20-27 to the Farragut Board of Mayor and Aldermen, an ordinance amending the Farragut Zoning Ordinance and Map, Ordinance 86-16, by rezoning the above noted property.

ADOPTED this 19th day of November 2020.

RE: Traffic Impact Study Report Review Farragut Town Center at Biddle Farms

Farragut, TN

Dear Mr. Smith

Cannon & Cannon, Inc. (CCI) appreciates the opportunity to review the traffic impact study report for the proposed Farragut Town Center at Biddle Farms development prepared by CDM Smith. It is our understanding that the proposed development will consist of a grocery store, retail shops, and multi-family residential units. We further understand that the development will be located east of the existing Kroger development. Access to Kingston Pike and Campbell Station Road will be provided via Brooklawn Street, and the development will also have access to Concord Road. The development is expected to produce between 6,000 and 7,000 new daily trips.

We have reviewed the report for this traffic impact study, and it is our opinion that the overall report content conclusions, and recommendations were developed using sound engineering methods and assumptions. The utilization of 2016 counts due to current traffic conditions with Covid was appropriate. The annual growth rates of 2.5% for 2020 existing traffic and 3.5% for 2025 background traffic are reasonable as is the factoring of the count at Brooklawn and the driveway accesses by 10%. CDM Smith acknowledged the traffic issues at the intersections of Kingston Pike with Campbell Station Road and Kingston Pike with Concord Road, and they provided potential mitigation measures for these issues.

Regarding traffic generated by the proposed development, we have no issues with the methods utilized and the assumptions made for the trip generation estimates. We further agree that it was appropriate to provide separate trip distributions for the residential and commercial components. Based on the capacity analysis comparisons of background traffic without the development and projected traffic with the development, we agree that the two critical intersections (Kingston at Campbell Station and Kingston at Concord) may experience unstable conditions without mitigation, but that these conditions will not significantly worsen due to traffic generated by the proposed development.

Sincerely,

Brian J. Haas, P.E., PTOE

INTRODUCTION

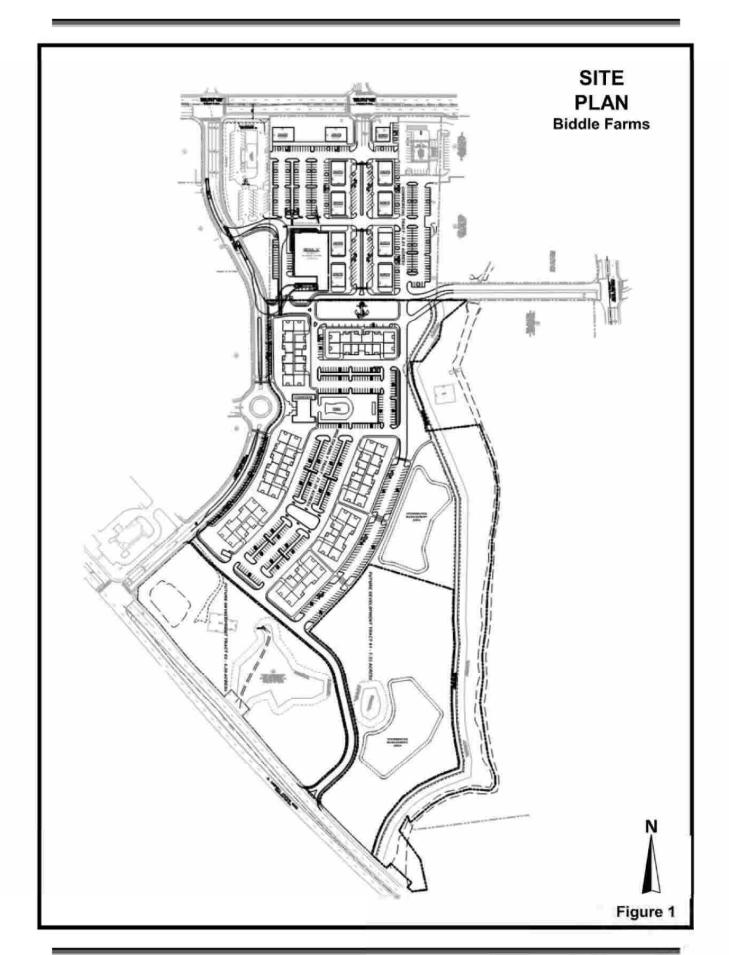

CDM Smith is pleased to submit this report to address any traffic impact and access for the development of the Biddle Farms Property, a mixed-use retail commercial and residential development. This traffic study required the collection of traffic data, generation of anticipated traffic volumes for the proposed site and development of projected traffic volumes for normal growth and from the potential site. Analyses of the resulting traffic projections were conducted to determine the capacity and levels of service for the site access to Kingston Pike, Campbell Station Road South, and Concord Road. This study will evaluate the development's impact and determine if any mitigation measures are necessary to minimize the traffic impact including improved roadway geometrics and traffic control devices.

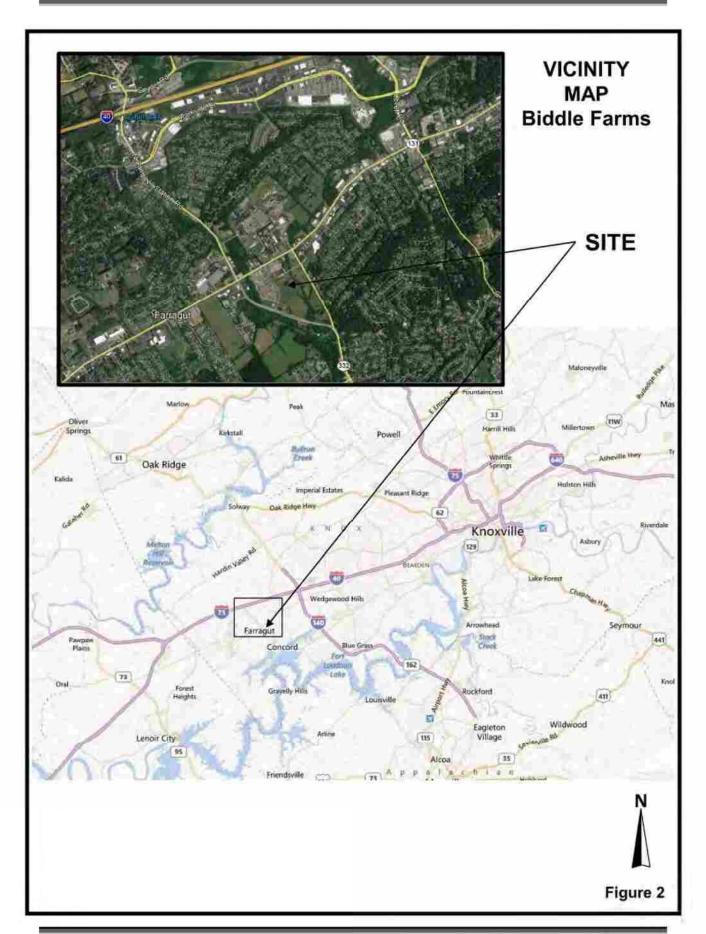

Project Description

The proposed development of the Biddle Farms is a mixed retail commercial and residential development on a total of approximately 29.3 acres with current zoning of C-1 and PCD, which could permit development of 295,000 square-feet of retail commercial. This study will address the site with a proposed PCD zoning and the development of a 20,442-square foot grocery with 42,000 square feet of retail shops and approximately 290 multi-family residential units. The retail commercial development will be of a town center concept which includes shops adjacent to local street facilities with on-street parking. Figure 1 shows the proposed site plan. The proposed access is to Brooklawn Street serving the Farragut Town Center with intersections to Kingston Pike (US 11/70) and South Campbell Station Road. The site would utilize an existing access to Concord Road to the east.

Site Location

The proposed development is to be located in the Town of Farragut at the old Kroger site with access opposite Lendon Welch Way at Kingston Pike. The site is bound by Kingston Pike to the north, Brooklawn Street to the west and Concord Road to the east. The site is southeast of the Kingston Pike and Campbell Station Road intersection. Figure 2 illustrates the site location relative to local and regional access.

LOCAL AND REGIONAL ACCESS

Local Access

The proposed local access is to Brooklawn Street with intersections to Kingston Pike (US 11/70) and South Campbell Station Road. Brooklawn Street is a 2-lane section with a posted speed limit of 25mph connecting Kingston Pike and South Campbell Station Road, Kingston Pike (US 11/70) is a 5-lane east and west arterial through Farragut with the posted speed for 45 mph extending to Lenoir City to the west and Knoxville central business district (CBD) to the east. Kingston Pike has an average daily traffic (ADT) of 22,260 to the west of the site and 34,790 to the east.

Campbell Station Road South is a 5-lane arterial extending north and south of the site between Concord Road (SR 332) to the south and Hardin Valley Road to the north. Campbell Station Road has an interchange with Interstate 40/75 to the north of the site. The posted speed limit of Campbell Station Road is 45 mph and has an average daily traffic volume of 26,890 north of Kingston Pike and 11,350 south of Kingston Pike, adjacent to the site.

The existing access to Concord Road will also be utilized by the proposed development. Concord Road is a 2-lane roadway extending south from Kingston Pike to Northshore Drive. Its posted speed is 30 mph and has an approximate ADT of 10,750 adjacent to the site.

Regional Access

Regional access to this site is also from Kingston Pike accessing east and west of the site with available access south of the site. Northshore Drive is a 2-lane regional minor arterial extending east and west of the site between Papermill Road to the east and Loudon County to the west. Northshore Drive serves much residential development with some neighborhood centers to the west. To the east, Northshore Drive serves again much residential development but with more available commercial development as it extends into City of Knoxville limits.

Interstate 40/75 access is provided from Campbell Station Road to the north, Watt Road to the west, and Lovell Road (SR 131) east of site. Interstate 40 is an east and west six-lane facility running through Knoxville to the east and Nashville to the west. Interstate 75 extends north to Lexington, Kentucky, and to the west, I-75 turns south to Chattanooga, Tennessee. The Interstate 40/75 facility has a 2019 ADT of 125,370 east of Campbell Station Road and north of the site.

EXISTING TRAFFIC CONDITIONS

Existing Traffic Control

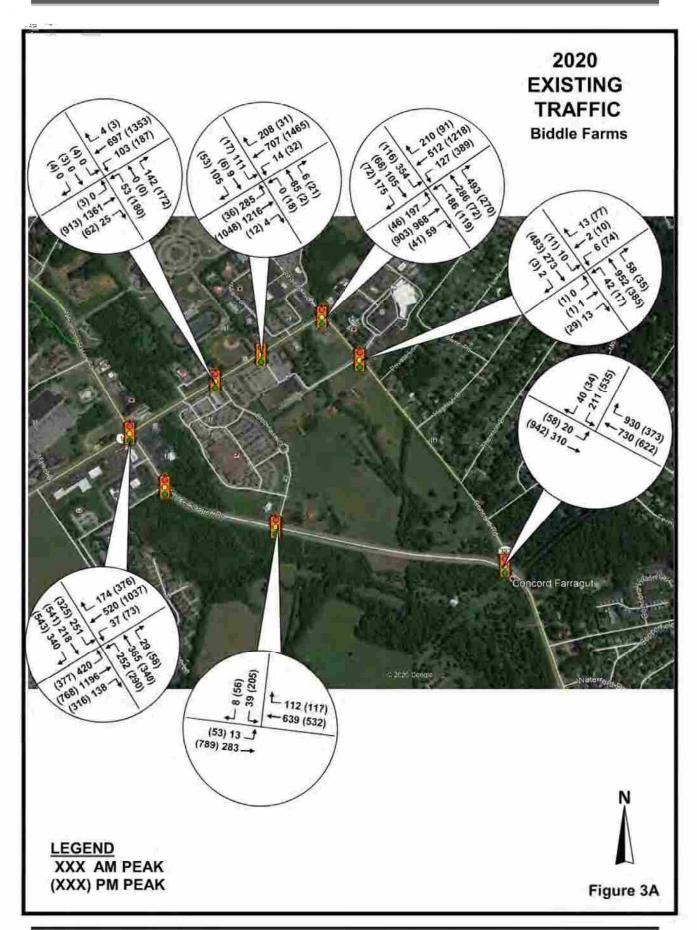

The proposed site accesses from Brooklawn Street to Kingston Pike and South Campbell Station Road are signalized. Signals are accessible to and from the site at Kingston Pike at Lendon Welch Way. Kingston Pike intersections with Campbell Station Road to the west and Concord Road to the east of the site are signalized. The South Campbell Station Road intersection with Concord Road is signalized. Brooklawn Street is a local street with a roundabout provided to serve the development and as a possible deterrent of cut-through traffic.

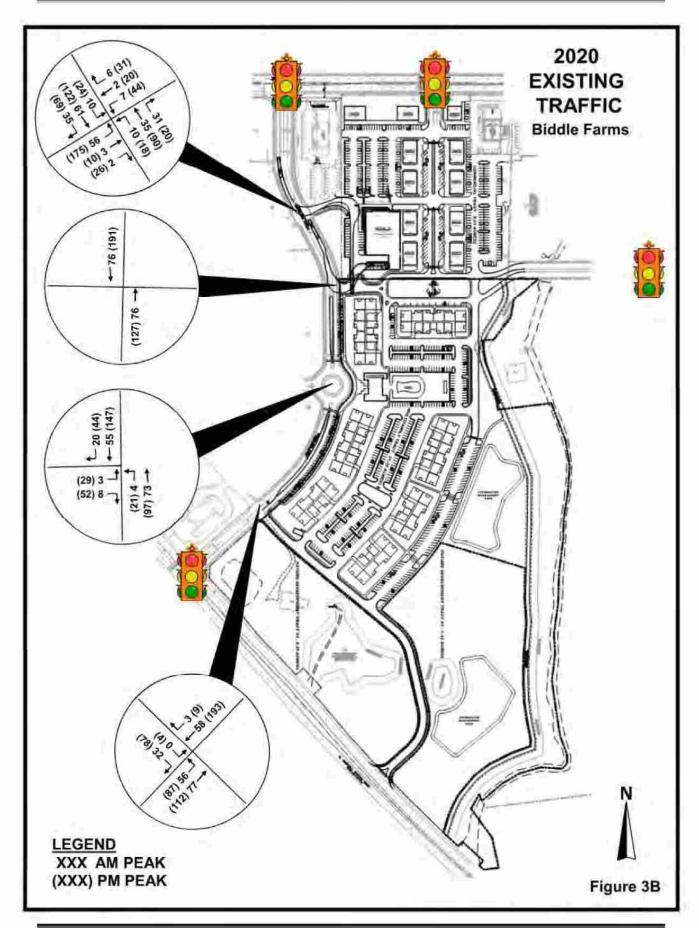

Existing Traffic Volumes

Current traffic counts were not conducted due to the COVID-19 pandemic which affects the 2020 traffic conditions. Traffic patterns have been affected due to many individuals working from home and schools not fully opened. Therefore, turning movement counts for the signalized intersections were provided by the Town of Farragut from a study performed in April 2016. The peak hours determined for Kingston Pike and Campbell Station Road were between 7:30-8:30AM and 5:00-6:00PM. The intersection of Kingston Pike and Campbell Station Road is the critical intersection in the vicinity of the site. With the peak hours of the development typically between 7:00-9:00AM and 4:00-6:00PM, the peak hour found using the Kingston Pike and Campbell Station Road turning movement count was appropriate for this study. The 2016 turning movements were factored up by 10-percent, reflecting a 2.5-percent annual growth rate from 2016 to 2020. This rate of growth was determined from the historical ADT traffic data available from the Tennessee Department of Transportation (TDOT). The TDOT data for count stations nearby the site show annual growth rates (between 2016 and 2018) ranging from 1.73-percent along South Campbell Station Road, 3.1-percent along Concord Road and -6.73-percent along Kingston Pike east of Concord Road. The count stations show traffic volumes trending up from 2012 and dipping in 2018 with another increase in 2019. The 2.5-percent annual growth rate provides a realistic, yet conservative, estimate for 2020 traffic volumes.

Current traffic was collected for the driveway accesses along Brooklawn Street. These turning movements were also factored 10-percent for an effect of the possible COVID-19 traffic conditions. Traffic along Brooklawn Street may not have been as affected by the pandemic conditions due to the nature of the traffic being more grocery and other essential supplies. This adjustment is to account for the possible reduction in 2020 traffic conditions related to COVID-19.

Figures 3 and 3B illustrate the AM and PM peak-hour turning movements for 2020.

Existing Capacity and Level of Service

In order to evaluate the current operations of the traffic control devices, capacity and level of service were calculated using the 2000 Highway Capacity Manual, Special Report 209 published by the Transportation Research Board (TRB). Signalized and unsignalized intersections are evaluated based on estimated intersection delays, which are related to level of service (LOS).

Level of service and capacity are measurements of an intersection's ability to accommodate traffic volumes. Levels of service for intersections range from A to F. LOS A is the best, and LOS F is failing. For signalized intersections, LOS A has an average estimated delay of less than 10 seconds per vehicle, and LOS F has an estimated delay of greater than 80 seconds. LOS C and D are typical design values. Within urban areas, LOS D (delay between 35 and 55 seconds) is considered acceptable by the Institute of Transportation Engineers (ITE) for signalized intersections.

Unsignalized intersection levels of service have lower thresholds of delays. LOS F exceeds estimated delays of 50 seconds per vehicle. For urban arterials, minor approaches may frequently experience levels of service E. Full level of service descriptions for unsignalized and signalized intersections are presented in Tables 1 and 2, respectively.

Table 1 LEVEL-OF-SERVICE (LOS) DESCRIPTION FOR SIGNALIZED INTERSECTIONS

| LOS | Average Control Delay per Vehicle (seconds) Description | | |
|-----|--|--|--|
| Α | ≤ 10.0 | Very low delay with extremely favorable progression. Most vehicles don't stop. | |
| В | > 10.0 and ≤ 20.0 | Generally good progression. Increase number of stops from that described for LOS "A" resulting in higher delays | |
| С | > 20.0 and ≤ 35.0 | Fair progression with increased delay. Number of stopping vehicles become significant; however, many still pass through the intersection without stopping. Stable flow. | |
| D | > 35.0 and ≤ 55.0 | The influence of congestion becomes more noticeable. Longer delays resulting from unfavorable progression, longer cycles, or high V/C ratios. Approaching unstable flow. | |
| E | > 55.0 and ≤ 80.0 | Limit of acceptable delay. Long delays associated with poor progression, long cycles, or high V/C ratios. | |
| F | > 80.0 | Unacceptable operation resulting from oversaturation (flow rates exceed capacity). Poor progression, long cycles, and high V/C ratios. | |

SOURCE: Highway Capacity Manual, TRB Special Report 209

Table 2
SERVICE (LOS) DESCRIPTION
FOR TWO-WAY STOP INTERSECTIONS

| Level of Service | Average Control Delay per Vehicle (seconds) |
|------------------|---|
| Α | ≤ 10.0 |
| В | > 10.0 and ≤ 15.0 |
| C | > 15.0 and ≤ 25.0 |
| D | > 25.0 and ≤ 35.0 |
| E | > 35.0 and ≤ 50.0 |
| F | > 50.0 |

SOURCE: Highway Capacity Manual, TRB Special Report 209

A second measure of performance that is particularly valuable under signalized operation is the volume-to-capacity ratio (V/C). This reflects the portion of capacity that is being utilized. As the V/C exceeds 0.90, the movement or intersection is less able to absorb additional traffic demand, so that relatively small increases in traffic volume can lead to significant increases in delay and possible failing conditions.

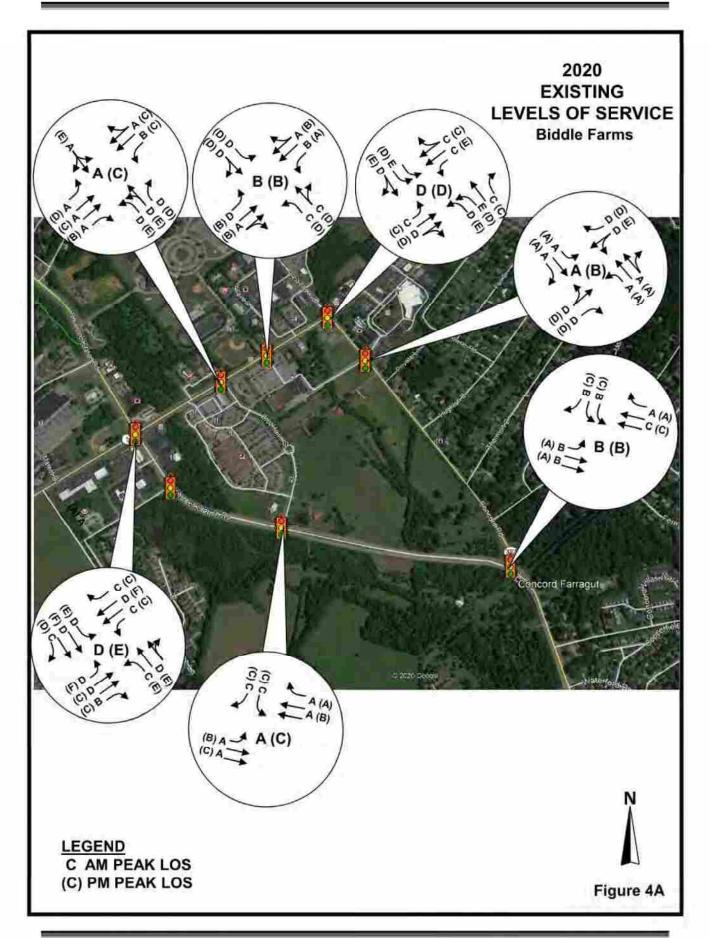

Analyses were conducted using the **Synchro** Software, developed by Trafficware. **Table 3** presents the signalized analyses of the study intersections. Intersection lane group levels of service are illustrated in **Figures 4A and 4B**.

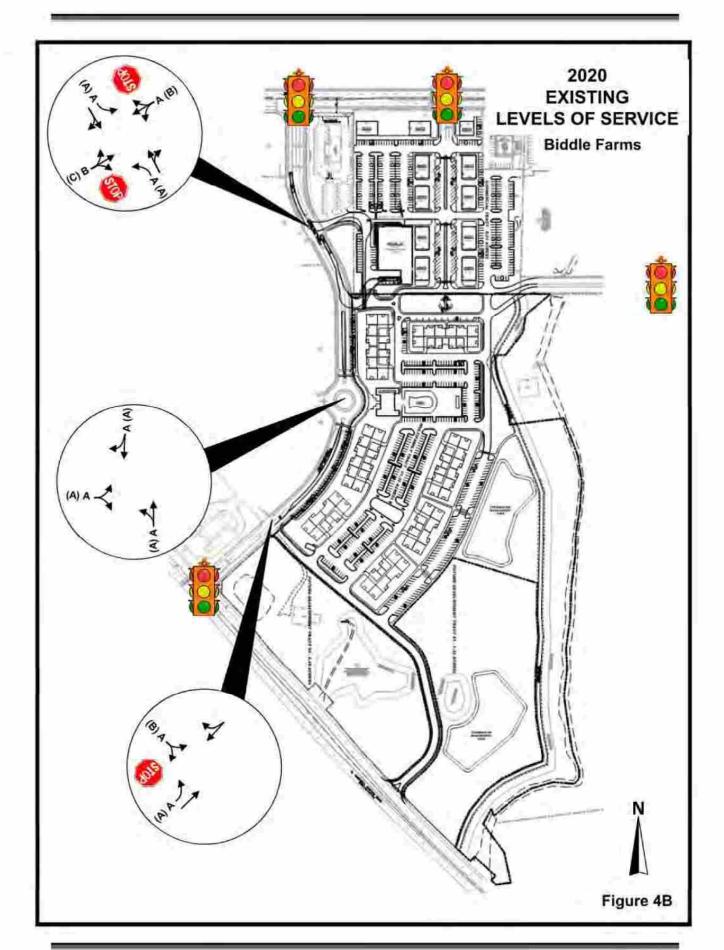

TABLE 3 2020 EXISTING CAPACITY AND LEVEL OF SERVICE

Note: Average vehicle delay estimated in seconds.

Current conditions at all study intersections are LOS E or better. Intersections are operating with a minimum LOS C except for the Kingston Pike intersections with Campbell Station Road and Concord Road. The PM peak hour for the intersection of Kingston Pike at Campbell Station Road is a LOS E and operates over capacity with a V/C ratio of 1.08, thereby an operation that is unstable and experiencing saturated traffic flows resulting in significant congestion with adverse traffic queues. The Kingston Pike intersection with Concord Road is a LOS D during the peak hours with a capacity ratio exceeding 0.90 indicating traffic conditions becoming unstable.

BACKGROUND TRAFFIC CONDITIONS

Background traffic is traffic that can be anticipated regardless of the proposed development. Traffic within the study area should continue to grow due to other development. This background traffic is projected for the purpose of establishing a baseline for the evaluation of the subject site impacts.

Background Traffic Volumes

Historical traffic data is reviewed to determine traffic growth trends in the study area. Using the TDOT count stations in the vicinity of the site, annual growth rates over the past 5 and 10 years was determined. These stations and respective annual growth rates include the following:

Concord Road (Sta 455) 4.9% (5-year history)
Concord Road (Sta 139) 2.6% (5-year history)
Campbell Station Road (Sta 294) 2.7% (5-year history)
Campbell Station Road (Sta 454) 4.5% (10-year history)
Kingston Pike (Sta 363) 2.0% (10-year history)
Kingston Pike (Sta 138) 4.4% (5-year history)

This evaluation determined an annual growth rates ranged between a negligible rate and 5.0-percent. For the purpose of this study, background traffic volumes were, therefore, developed assuming an annual compounded growth rate of 3.5-percent. Background traffic is projected for the year 2025 thereby reflecting an 18.8-percent growth (compounded 3.5-percent for 5 years) applied to the through traffic volumes on Kingston Pike, Campbell Station Road, and Concord Road. Build-out of the site is assumed in the next five years. Actual build-out, however, will largely depend on the housing and retail markets.

Figure 5 illustrates the grown turning movements reflecting the 2025 background traffic growth.

Background Capacity and Level of Service

Analyses were performed for the 2025 background conditions. The results of these analyses are presented in **Table 4**. The levels of service for Year 2025 are maintained from existing conditions.

The Kingston Pike intersections with Campbell Station Road and Concord Road will deteriorate to unacceptable levels of service with a PM peak hour LOS F and capacity ratio of 1.36 for Campbell Station Road and a LOS E and capacity ratio of 1.06 for Concord Road during the AM peak hour. Concord Road PM peak hour will also experience a capacity ratio exceeding 0.90 also indicating unstable traffic condition.

Note: Average vehicle delay estimated in seconds.

With background left-turn volumes exceeding 300vph for the northbound, southbound, and eastbound approaches of the Kingston Pike and Campbell Station Road intersection, double left-turn lanes are needed for the intersection capacity and the reduction in the delay. Double left-turn movements for the Kingston Pike and Campbell Station Road intersection would be very difficult with the current development of the intersection corners. The provision of these double left-turn lanes would require several design exceptions if they were to be considered by the Town of Farragut, minimizing any right-of-way required.

For the Kingston Pike intersection with Concord Road, the LOS E and capacity can be mitigated with northbound double right-turn lanes. Figures 6A and 6B illustrate the background intersection lane group levels of service without and with mitigation, respectively.

PROJECT IMPACTS

Project conditions are developed by generating traffic based on the proposed land use, distributing the trips to the transportation network, and conducting analyses for capacity and level of service.

Trip Generation

Project traffic was determined using the publication, Trip Generation, 10th Edition. This reference is published by the Institute of Transportation Engineers (ITE) and represents national data collected for many different land uses including industrial, residential and commercial uses. Trip Generation is an essential tool in calculating the traffic, which may be generated by a proposed development. The study generated traffic for the approximate 29.3 acres of mixed commercial-residential development with a 20,442 square-foot Aldi's grocery with 42,000 of retail shops and approximately 290 multi-family units. The grocery land use utilized the ITE land use code (LUC 850) and the retail shops used the LUC for shopping center (LUC 820). The trip generation for the residential land use, however, utilized local trip generation rates adopted by the Knoxville-Knox County Metropolitan Planning Commission in July of 2000 for multi-family residential developments. Local trip rates were studied in accordance with the publication, Trip Generation, 6th Edition.

Some trip generation studies have included surveys addressing pass-by traffic. This is traffic already on the adjacent street that is attracted to the proposed development. Studies conducted for pass-by traffic have suggested that a percentage of the traffic generated by commercial retail, such as the land use at hand, may originate from the existing traffic flow; therefore, the project does not necessarily introduce all new traffic to the transportation system.

Pass-by traffic percentages differ relative to specific land uses and their densities. Some studies have shown varied results; however, the ITE publications, Transportation and Land Development by Virgil G. Stover and Frank J. Koepke, and Trip Generation have combined these studies to suggest uniform rates for given land uses. These rates range from 14-percent for hardware stores to 60-percent for neighborhood shopping centers, gross leasable area less than 100,000 square feet. Service stations and fast-food restaurants also exhibit high pass-by rates of 58-percent and 45-percent, respectively.

With the above in mind, a 20-percent pass-by and 5-percent internal trips were assumed for the proposed development. From the trip generation calculations, the proposed site may generate approximately 8,480 daily weekday trips. After the consideration of pass-by traffic and internal trips, approximately 6,730 new daily trips (Primary) may be generated for a typical weekday. Table 5 presents the trip generation of this proposed site.

TABLE 5 TRIP GENERATION

(2) Institute of Transportation Engineers-Trip Generation, 10th Edition

The trip generation was also conducted for the current zoning and the possible development of 295,000 square feet of retail commercial. This trip generation used a shopping center land use (LUC 820). The trip generation of the currently proposed development and the possible development with the current zoning is compared in Table 6. The comparison of the trip generation found the proposed site would produce fewer trips than the possible development with the current zoning. With the same pass-by rate of 20-percent applied to the current zoning trip generation, the primary daily trips generated were 10,037 and the PM peak hour trips were 968. This results in up to 3,300 fewer daily trips and 390 fewer PM peak hour trips with the proposed mixed commercial and residential development. An additional approximate 75 trips might be generated during the AM peak hour with the mixed-use commercial and residential site as compared to the current zoning.

Trip Distribution and Assignment

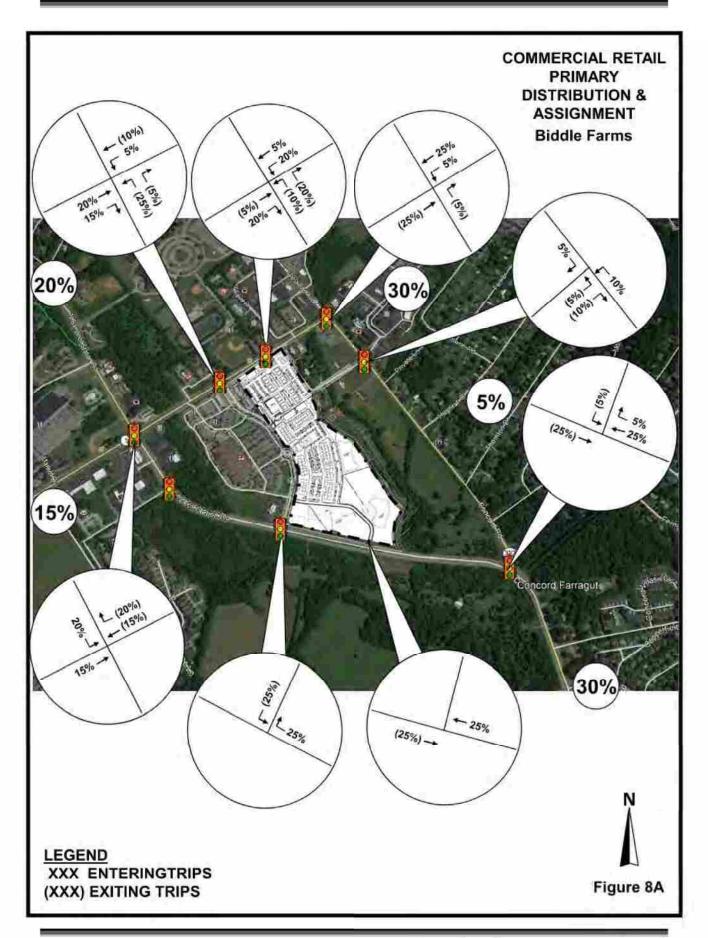

The proposed Biddle Farms should have both a localized and some regional area of influence. The retail commercial development should have a more neighborhood area of influence, a radius of approximately five miles; whereas, the residential could have some regional influence as it should exhibit commuter traffic patterns. The commercial trip distribution and assignment considered the current distribution of the current Kroger center and traffic entering and exiting Brooklawn Street. The residential distribution assumed a similar pattern exhibited by morning peak hour commuter traffic. The primary distribution, therefore assumes the following:

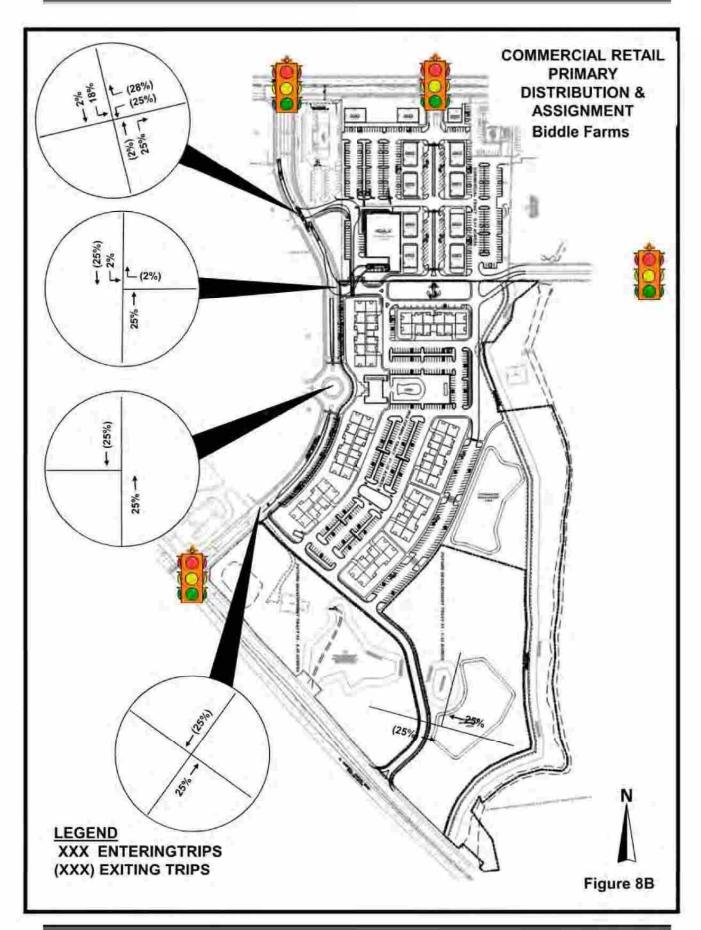

| | <u>Commercial</u> | Residential |
|---|-------------------|-------------|
| Kingston Pike (US 11/70) West | 15% | 15% |
| Kingston Pike (US 11/70) East | 30% | 40% |
| So. Campbell Station Road/Concord Road (SR 332) South | 30% | 20% |
| No. Campbell Station Road North | 20% | 25% |
| Concord Road (SR 332) within the Site Vicinity | 5% | |

Figures 7A and 7B illustrate the primary trip assignment for the primary residential trips, and Figures 8A and 8B illustrate the primary trip assignment for the commercial development.

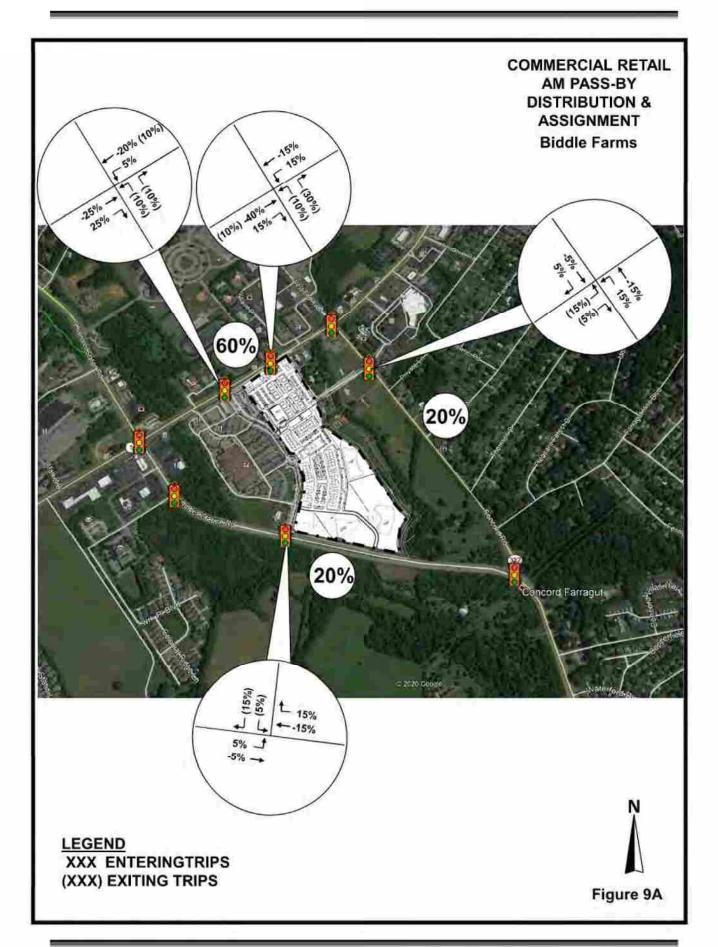

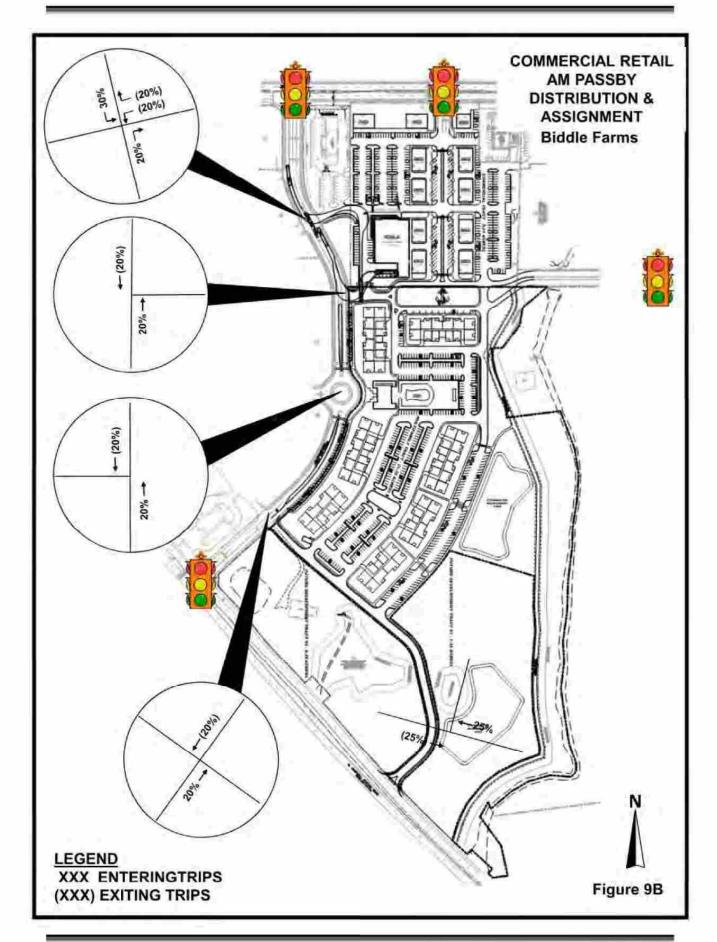

The pass-by trips for the retail commercial uses were assumed 60-percent from Kingston Pike and 20-percent from either Campbell Station Road and Concord Road. Figures 9A and 9B illustrate the pass-by assignments for the AM peak hour, and Figures 10A and 10B illustrate the PM peak hour assignment.

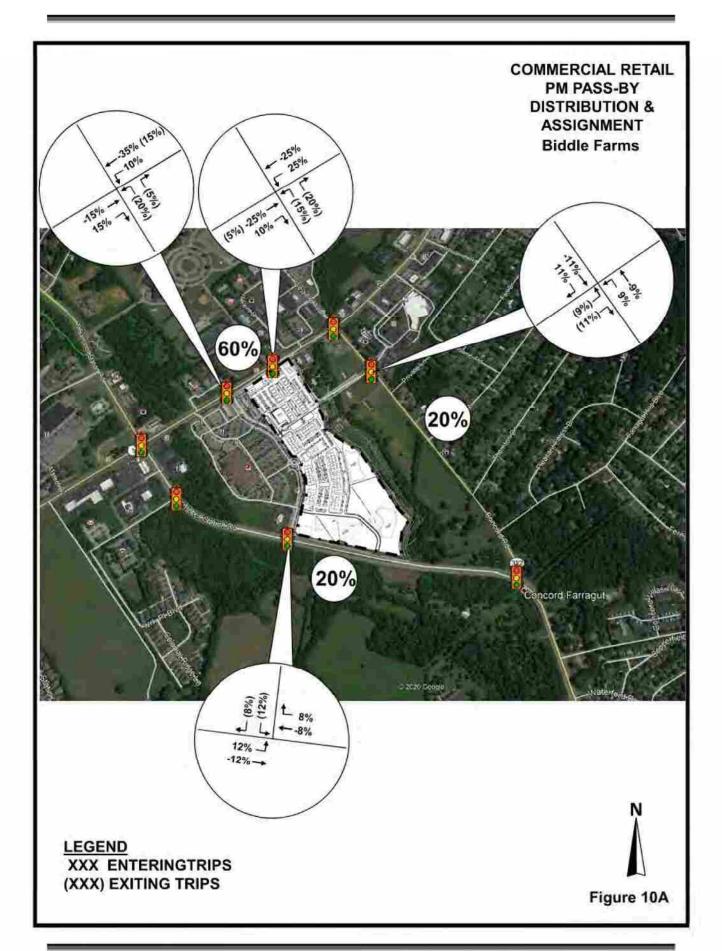

Project Traffic Volumes

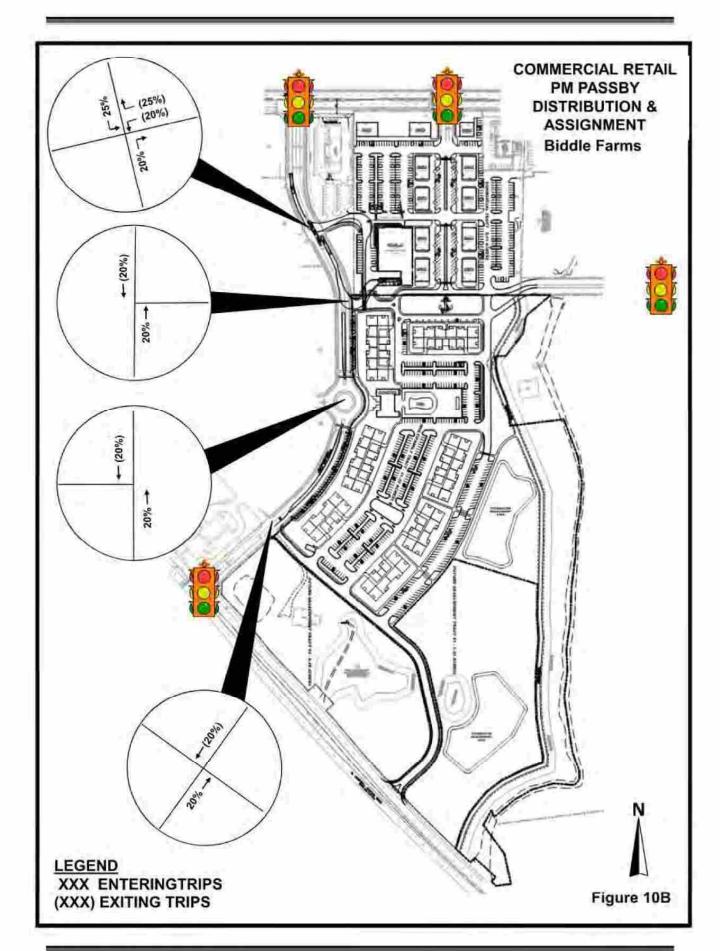

By multiplying the trips generated by the trip assignments, the primary and pass-by trips were developed for the study intersections; Figures 11A and 11B illustrate the resulting peak hour primary trips, and Figures 12A and 12B illustrated the Pass-by trips associated with the proposed site. The total site trips (Primary+Pass-by) are illustrated in Figures 13A and 13B.

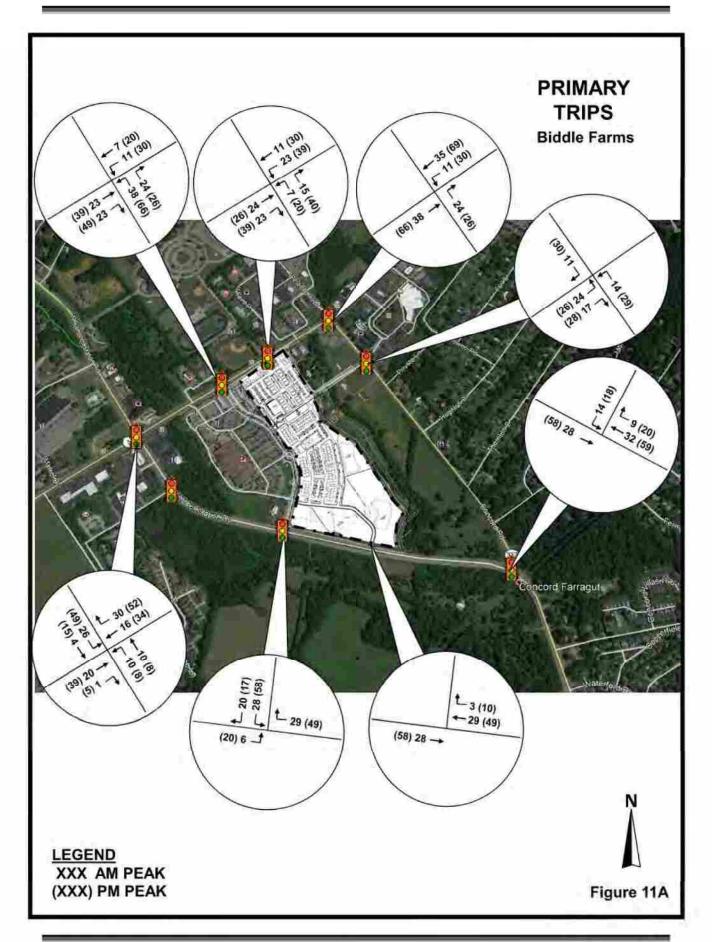

The impact of the site related traffic to the critical intersection of Kingston Pike and Campbell Station Road is limited and not considered significant as it's not more than 3.5-percent. The site trips did not account for more than 8.8-percent for than any of the study intersections with the greater impact of site trips determined for the site access to and from Concord Road.

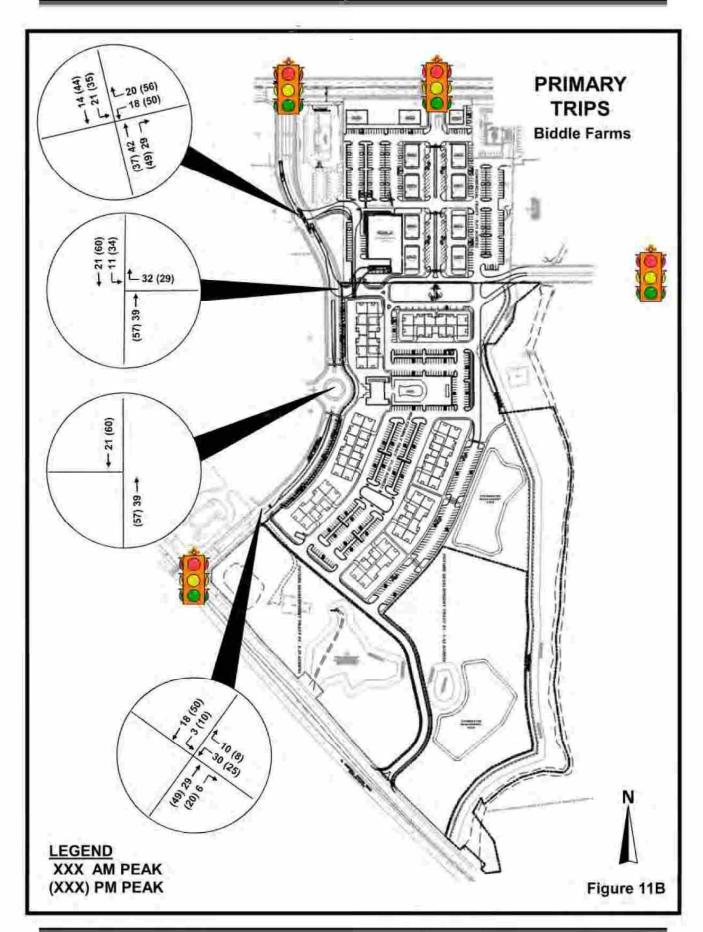

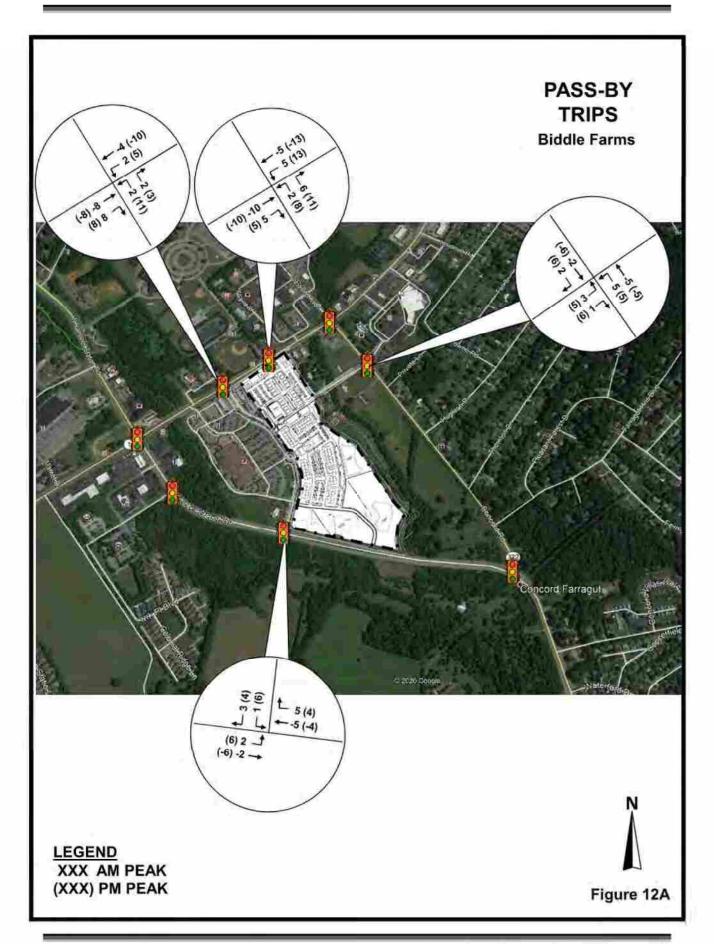

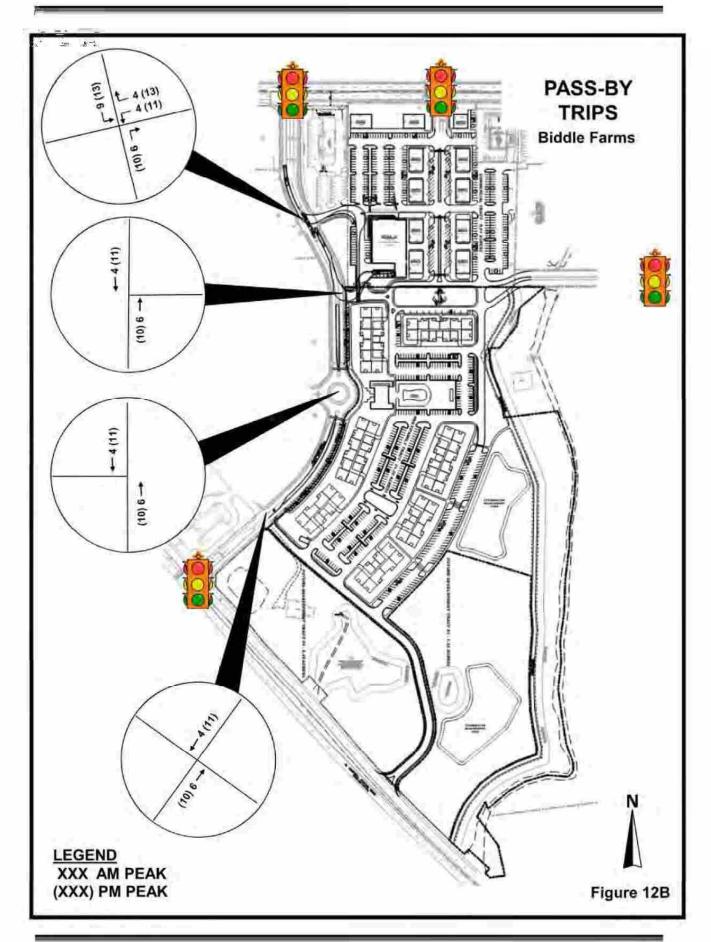

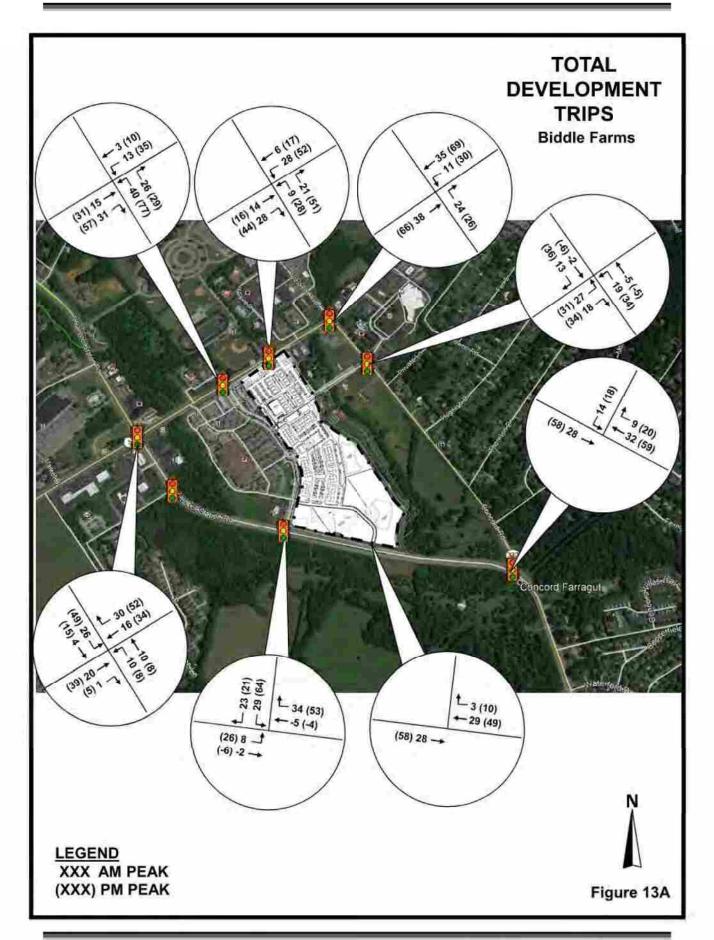

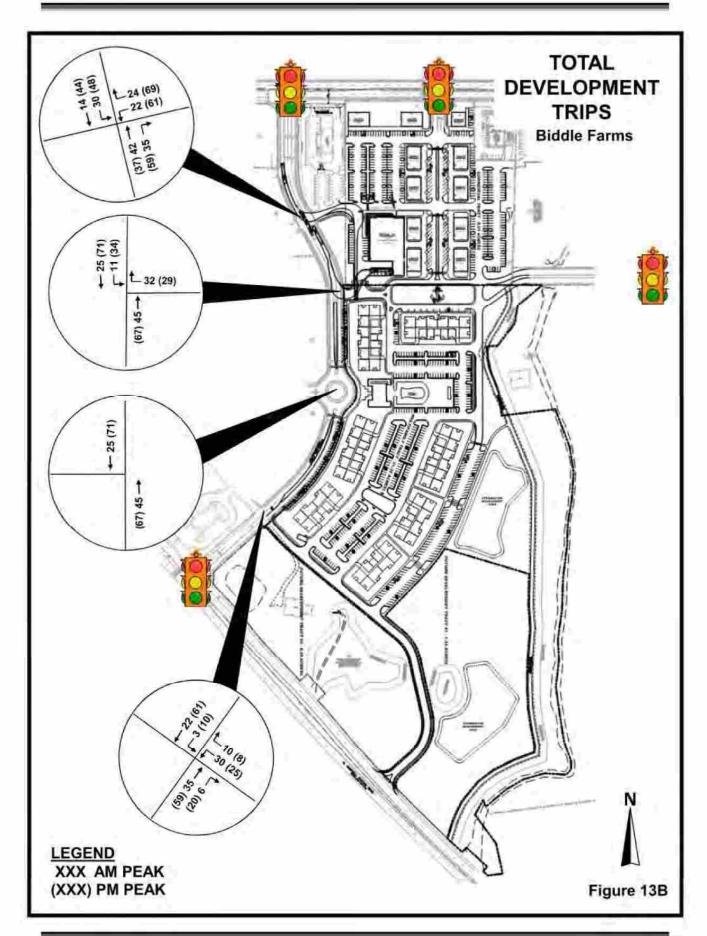

Total Projected Traffic Volumes

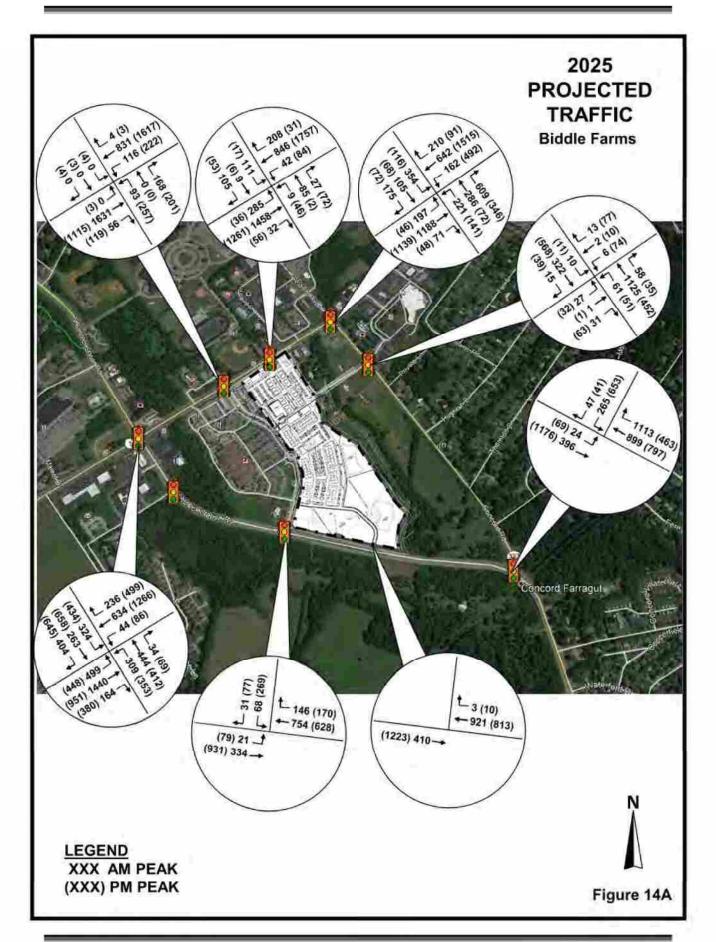

Background and site traffic volumes were added together to develop post-development traffic volumes for the year 2025. **Figures 14A and 14B** illustrate the 2025 traffic projections, which were analyzed to assess any mitigation measures identified including traffic control devices and roadway and intersection geometry.

Projected Capacity and Level of Service

Analysis of the 2025 projected traffic was conducted. **Table 7** presents the capacity and levels of service for the study intersections. A summary of the capacity and LOS analyses is presented in **Table 8**. **Figures 15A and 15B** illustrate the lane group levels of service for the study intersections. **Figure 16** illustrates the lane group levels of service with mitigation.

From the analyses conducted, changes in capacity ratios and delays are minimal for the study intersections, and levels of service did not change significantly from the background traffic conditions. Analyses determined that the proposed site development did not result in any significant changes from the analyses conducted for the background traffic conditions which found that the Kingston Pike intersections with Campbell Station Road and Concord Road may experience a LOS F during the PM peak hour and an E during the AM peak hour, respectively; the site impact increase the average intersection delay less than 6 seconds for either intersection and the increase in the V/C ratio not more than 4-percent.

With double left-turn lanes provided for the northbound, southbound, and eastbound approaches of the Kingston Pike and Campbell Station Road intersection, the LOS and intersection capacity may be mitigated to the existing 2020 traffic conditions. For the intersection of Kingston Pike and Concord Road, an added northbound right-turn lane, providing for double right-turn movement would return the intersection to its current 2020 LOS and capacity. The site impact on these intersections are not significant and the need for this mitigation is due to background traffic conditions. The provision of the double left-turn lanes for the intersection of Kingston Pike and Campbell Station Road would be very challenging with design exceptions as previously stated in the background section of this report. The site has a minimal impact on the intersection.

FARRAGUT TOWN CENTER AT BIDDLE FARMS

RECOMMENDATIONS

The analyses conducted and the review of the traffic volumes identified the following recommendations:

 Minimize landscaping, using low growing vegetation, and signing at the planned site accesses.

Intersection design should conform to the recommended standards and practices of the American Association of State Highway and Transportation Officials, the Institute of Transportation Engineers, Tennessee Department of Transportation (TDOT), and the Town of Farragut.

CONCLUSION

The study of the Biddle Farms, a proposed mixed commercial and residential development evaluated the projected traffic conditions. Background traffic was determined using a 3.5-percent annual compounded growth rate until the horizon year 2025. Traffic associated with the proposed project was then generated and distributed to the proposed site accesses. The proposed site may generate approximately 8,480 daily weekday trips. After the consideration of pass-by traffic and internal trips, approximately 6,730 new daily trips (Primary) may be generated for a typical weekday. Using the identified turning movements for the projected traffic conditions, unsignalized and signalized capacity and level of service analyses were conducted using the 2000 Highway Capacity Manual.

Current conditions for study intersections are LOS E or better. Intersections are operating with a minimum LOS C except for the Kingston Pike intersections with Campbell Station Road and Concord Road. The PM peak hour for the intersection of Kingston Pike at Campbell Station Road is a LOS E and operates over capacity with a V/C ratio of 1.08, thereby an operation that is unstable and experiencing saturated traffic flows resulting in significant congestion with adverse traffic queues. The Kingston Pike intersection with Concord Road is a LOS D during the peak hours with a capacity ratio exceeding 0.90 indicating traffic conditions becoming unstable.

From the analyses conducted, changes in intersection capacity and delays are minimal for the study intersections, and levels of service did not change significantly from the background traffic conditions. Analyses determined that the proposed site development did not result in any significant changes from the analyses conducted for the background traffic conditions which found that the Kingston Pike intersections with Campbell Station Road and Concord Road may experience a LOS F during the PM peak hour and an E during the AM peak hour, respectively; the site impact increase the average intersection delay less than 6 seconds for either intersection and the increase in the V/C ratio not more than 4-percent. The poor levels of service for the Kingston Pike intersections with Campbell Station Road and Concord Road would occur regardless of the proposed development.

The proposed site does not have a significant impact on the adjacent road network as traffic projections and intersection analyses found little impact resulting from the proposed development. This impact is minimized with the proposed signalized accesses available to the site thereby affectively distributing the trips generated by the mixed-use development. The proposed development is a lower trip generator than the zoned property which could possibly develop an

approximate 295,000 square feet of retail uses. The comparison of the trip generation found the proposed site reduces the trip generation potential as compared to the possible development with the current zoning. With the same pass-by rate of 20-percent applied to the trip generation of a 295,000 square foot center, the daily trips generated may be 3,300 fewer daily trips and 390 fewer PM peak hour trips with the proposed mixed commercial and residential development. An additional approximate 75 trips might be generated during the AM peak hour with the mixed-use commercial and residential site but is not significant as it is managed with numerous accesses to the adjacent street network.

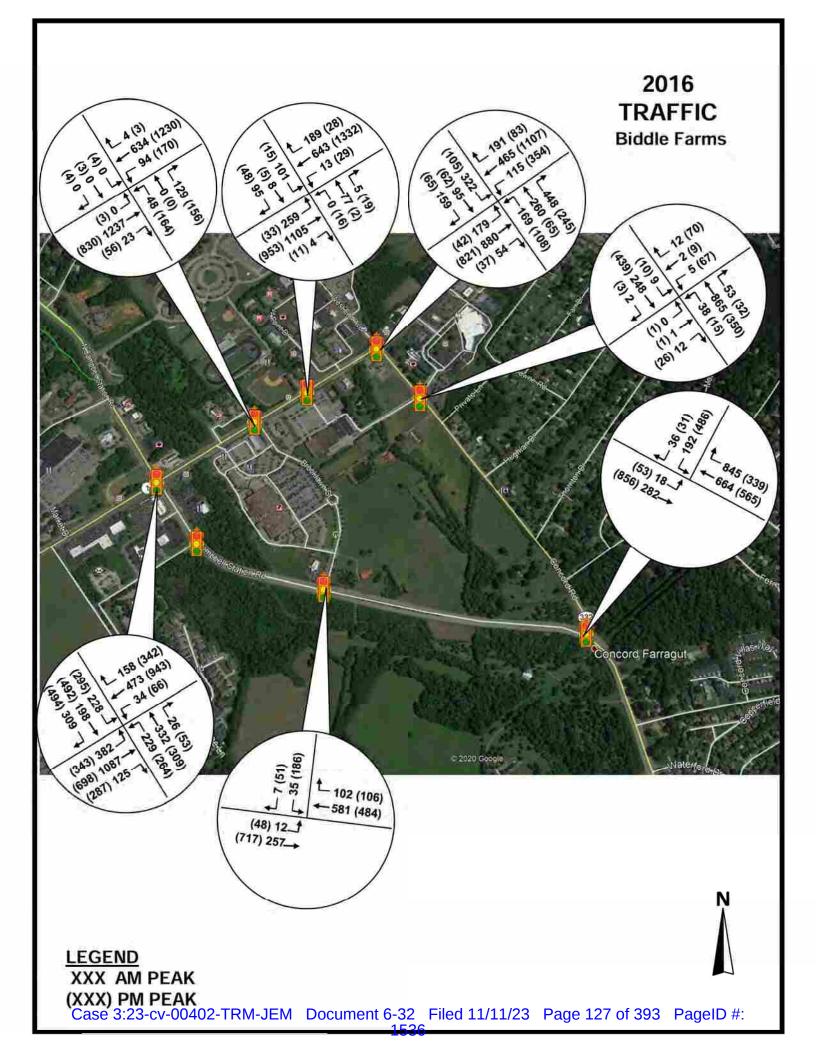

The proposed site access for the site was found to operate at acceptable levels of service; however, the adjacent Kingston Pike intersections with Campbell Station Road and Concord Road may experience lower and unacceptable levels of service as the background traffic will have a significant impact on the intersections' capacities. Background left-turn volumes exceed 300vph for the northbound, southbound, and eastbound approaches of the Kingston Pike and Campbell Station Road intersection thereby requiring double left-turn lanes. Double left-turn lanes for the Kingston Pike and Campbell Station Road intersection would be very difficult with the current development of the intersection corners. The provision of these double left-turn lanes would require several design exceptions if they were to be considered by the Town of Farragut, minimizing any right-of-way required.

Mitigation of background traffic impacts for the of Kingston Pike intersection with Concord Road is an additional northbound right-turn lane. The mitigation of both Kingston Pike intersections with Campbell Station Road and Concord Road would return level of service and capacity back to that currently experienced for the 2020 traffic conditions. The development of the Biddle Farms property did not determine any required mitigation as its impacts were not significant and acceptable levels of service provided for the accesses to the site.

Intersection Summary

^{# 95}th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

^{# 95}th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

^{# 95}th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Intersection Summary

Volume exceeds capacity, queue is theoretically infinite.
 Queue shown is maximum after two cycles.

^{# 95}th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Intersection Summary

^{# 95}th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary
95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Intersection Summary

^{# 95}th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

Volume exceeds capacity, queue is theoretically infinite.
 Queue shown is maximum after two cycles.

^{# 95}th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

^{# 95}th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

Volume exceeds capacity, queue is theoretically infinite.
 Queue shown is maximum after two cycles.

^{# 95}th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

Volume exceeds capacity, queue is theoretically infinite.
 Queue shown is maximum after two cycles.

^{# 95}th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

Volume exceeds capacity, queue is theoretically infinite.
 Queue shown is maximum after two cycles.

^{# 95}th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Intersection Summary

^{# 95}th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

^{# 95}th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

^{# 95}th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Intersection Summary

^{# 95}th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Volume exceeds capacity, queue is theoretically infinite.
 Queue shown is maximum after two cycles.

^{# 95}th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Volume exceeds capacity, queue is theoretically infinite.
 Queue shown is maximum after two cycles.

^{# 95}th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

^{# 95}th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

November 2, 2020

Mr. Darryl W. Smith, P.E. Town Engineer Town of Farragut 11408 Municipal Center Drive Farragut, Tennessee 37934

RE: Traffic Impact Study Report Review Farragut Town Center at Biddle Farms

Farragut, TN

Dear Mr. Smith

Cannon & Cannon, Inc. (CCI) appreciates the opportunity to review the traffic impact study report for the proposed Farragut Town Center at Biddle Farms development prepared by CDM Smith. It is our understanding that the proposed development will consist of a grocery store, retail shops, and multi-family residential units. We further understand that the development will be located east of the existing Kroger development. Access to Kingston Pike and Campbell Station Road will be provided via Brooklawn Street, and the development will also have access to Concord Road. The development is expected to produce between 6,000 and 7,000 new daily trips.

We have reviewed the report for this traffic impact study, and it is our opinion that the overall report content, conclusions, and recommendations were developed using sound engineering methods and assumptions. The utilization of 2016 counts due to current traffic conditions with Covid was appropriate The annual growth rates of 2.5% for 2020 existing traffic and 3.5% for 2025 background traffic are reasonable as is the factoring of the count at Brooklawn and the driveway accesses by 10%. CDM Smith acknowledged the traffic issues at the intersections of Kingston Pike with Campbell Station Road and Kingston Pike with Concord Road, and they provided potential mitigation measures for these issues.

Regarding traffic generated by the proposed development, we have no issues with the methods utilized and the assumptions made for the trip generation estimates. We further agree that it was appropriate to provide separate trip distributions for the residential and commercial components. Based on the capacity analysis comparisons of background traffic without the development and projected traffic with the development, we agree that the two critical intersections (Kingston at Campbell Station and Kingston at Concord) may experience unstable conditions without mitigation, but that these conditions will not significantly worsen due to traffic generated by the proposed development.

Sincerely,

Brian J. Haas, P.E., PTOE Project Manager

The materials presented in this package outline the conceptual design intent for the project as of November 2020, and will be further developed in the design phase of the project.

PCD PLANNING OBJECTIVES

Introduction:

The concept site plan is the product of the merger of:

- The Town of Farragut's desire and vision to create a "downtown" for the community in which a village scale could be complimented with a mixed-use blend of commercial, office, residential, and public place components; with
- Private development goals of advancing high quality and distinctive retail/commercial and multifamily residential for the community of Farragut.

into a single master planned development on the site known as Biddle Farms.

The existing site is occupied by a tired retail strip, a collection of independent out parcels, an extensive flood plain, storm water retention for the Kroger retail development west of the site, and a natural all-season creek that flows north to south through the long axis of the site.

This fusion of public and private objectives is guided by a vision document and design guidelines created by the Town of Farragut. Those guidelines seek a development pattern that promotes a pedestrian friendly setting where outdoor browsing and dining, special events, and street activities can animate the

Site Evaluation:

The site possesses challenges and opportunities. Key elements of which are, the flood plain and the creek, that both govern net site usability. Out parcels separately owned must be honored within the overall property boundary and access for their continued use protected.

The existing retail complex is seen as outdated and is not considered worthy of protection.

Much of the site was built in compliance with FEMA regulations and marginally meet the federal guidelines that standard imposes. Farragut imposes a greater standard which negatively affects all the existing structures and infrastructure.

As part of a master planning effort, the hydrology of the area must be evaluated and the storm water management governing retention, storage, outflow, and water quality must be applied to moderate flooding that occasions the site and improve impacts on neighboring sites downstream from the subject parcel.

The development vision, while it considers the entirety of the Biddle Farm, will focus on a select portion of the site assigned to the development vision. This section will largely overlay the existing impervious surfaces

development in a 24/7 setting, and where residents within the Town Center can enjoy the "downtown" as an added quality of life amenity.

By contrast to the pedestrian experience, parking lots are directed to be largely shielded from public view along the internal street. Street parking by exception using angled or parallel spaces along internal and some external streets are intended to serve as both calm traffic and convenient access to commercial venues.

The primary frontage on Kingston Pike seeks a "main street" intersection aligned with the existing signal in serving the high school to the north. Brooklawn Street shall define the westerly border, Concord Road the easterly border, and Campbell Station Road the southern border.

Within limits of environmental restrictions all four street shall seek interconnectivity through the site so to allow both vehicular and pedestrian movement to access the "town center" from any direction and discharge accordingly.

A limited number of older structures that were part of the Biddle farm may be viewed as of historic value and were to be considered in the planning.

of the prior retail occupancies and extend southerly along Brooklawn Street. Much of the remaining lands will be held in reserve for "open space" and storm water detention. This open space could prove of value as a public place suitable for informal events, open air activities, and leisure enjoyment.

The creek with its wooded shoulders, offers an ideal opportunity to have a lineal park reaching through the site offering pedestrian, bicycle, and accessible movement as a natural outdoor promenade for area residents to enjoy.

An existing retention pond in service to Kroger should be consolidated into a master storm water management system allowing for a more compact allocation of lands to complete the Town Center composition.

A roundabout on Brooklawn Street offers some traffic calming along that "cut through" drive. The integration of residential occupancy in any mixed-use setting should seek roads with moderated speeds and traffic lanes that encourage more cautious movement.

Page 1 of 2

FARRAGUT TOWN CENTER a) Biddle Farms

A Special Observation:

Within the time of the master planning and staff coordination of the proposed development the impact of the Corona Virus emerged and forever has changed much of the lifestyle and value system all seek to enjoy. The impact of this crisis may stay with all of us for a long time, impacting the ideals of group gatherings, and social activities for the foreseeable future. Planning has and will continue to seek an optimistic view that a measure of the "old normal" will return, where sidewalk dining, and events of community interest (art festivals, car shows, community concerts, etc.) will again be allowed and invited. The plan however also seeks to consider the necessary dependency upon retail and service access without leaving the car. This standard has now become a public health consideration. Measures to address this "new normal" should also consider the best way to protect the pedestrian experience while not imposing hardships on either consumers or the service/store entities that cater to their needs.

The Design Response:

Through the design process virtual images were generated to offer texture to the two-dimensional planning proposals as they unfolded. These images sought to offer assurances on scale, pedestrian comfort, landscape applications that deviate from rigid interpretation of the design guidelines, parking, signage, and exterior character and finish. Great care was taken in seeking proportions sufficient for comfort but not too expansive they "institutionalize" the streetscape or setting.

The integration of residential occupancies into a unified campus offers challenges and benefits. While retail is an amenity when convenient enough to walk to it, it can be an intrusive neighbor when noise, trash and service demands are considered.

Vertical mixed use was thus strongly resisted in favor of a horizontal plan where commercial users, and their vehicles would not overlap the private and more sanctified accommodations of the residents who would choose to line in the Town Center. Pedestrian connectivity is promoted with a "village square" that both commercial and residential share. Pedestrian promenades down "main street" and around the square connect access from all four street edges and insure by treatment the internal street system appears like a pedestrian area you can drive through rather than a vehicular area you can walk by.

Objectionable views of service areas are managed to a minimum. Residential buildings facing the public streets of the development shield exposure to the parking fields of the residents and offer residents a secure parking domain free of non-residential demand.

Brooklawn Street is changed from a three-way street with suicide center lane, to a two-lane street with diagonal parking. This softens the street face for residences, calms through traffic, an offers more landscaping opportunity than with just a planted parkway between sidewalk and curb.

The commercial portions of the complex seek a one- and two-story statured heights allowing for store ceilings as high as 18 to 20 feet within. False second floor facades animate the street elevations and offer both material and height variations that create an appearance of independent structures attached instead of the more typical retail ribbon facade in most shopping districts.

The residential structures seeking compact adjacency to the commercial are proposed at four stories with 9 and 10' ceiling heights. While taller their vertical proportions will not oversize that of the neighboring commercial structures. Dwellings will address the street with private porch like entries and with raised stoops and porches reflective of traditional designs.

The overall appearance borrows from traditional proportions and materials while seeking a current appeal reflecting the taste and expectations of a New Town Center.

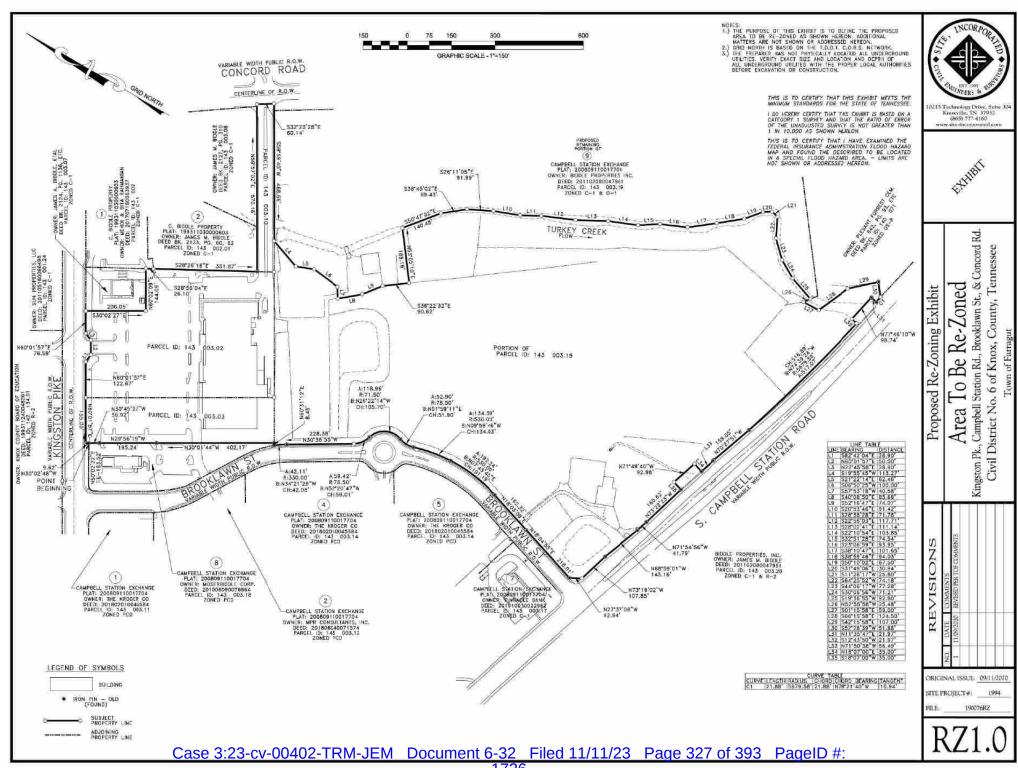

Summary:

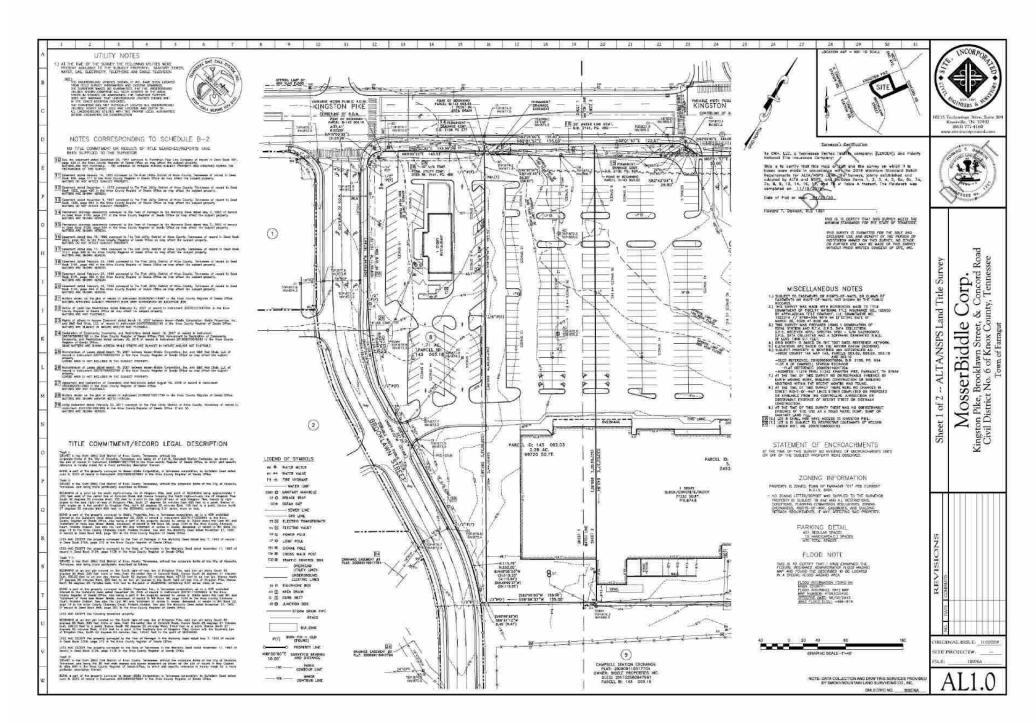

The plan, the street images, the narrative are offerings that are intended to show objective. More work is needed to carry the vision instruments to fulfillment. Engineering, environmental, and regulatory standards will guild the next evolution of the Town Center. Some flexibility toward full compliance with all regulatory and constructability standards will be necessary. This plan intends to subscribe the goals it portrays even if changes are essentially demanded.

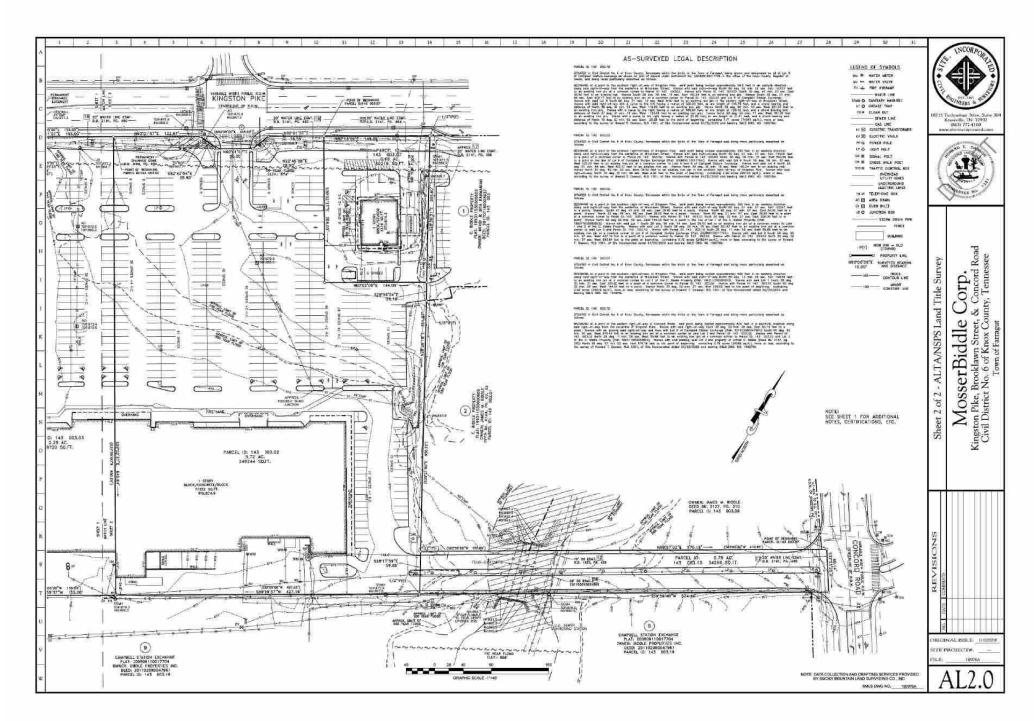

A community vision paints a picture that does not consider economic reason. A private development requires economic balance between vision and performance. Much of the images shown are untested in the market. The development team recognizes the risk associated with unproven solutions and accepts this risk depending upon the collaborative understanding from the Town of Farragut in the efforts that have preceded this submittal. Staff and applicant agree with balance both missions can be fulfilled.

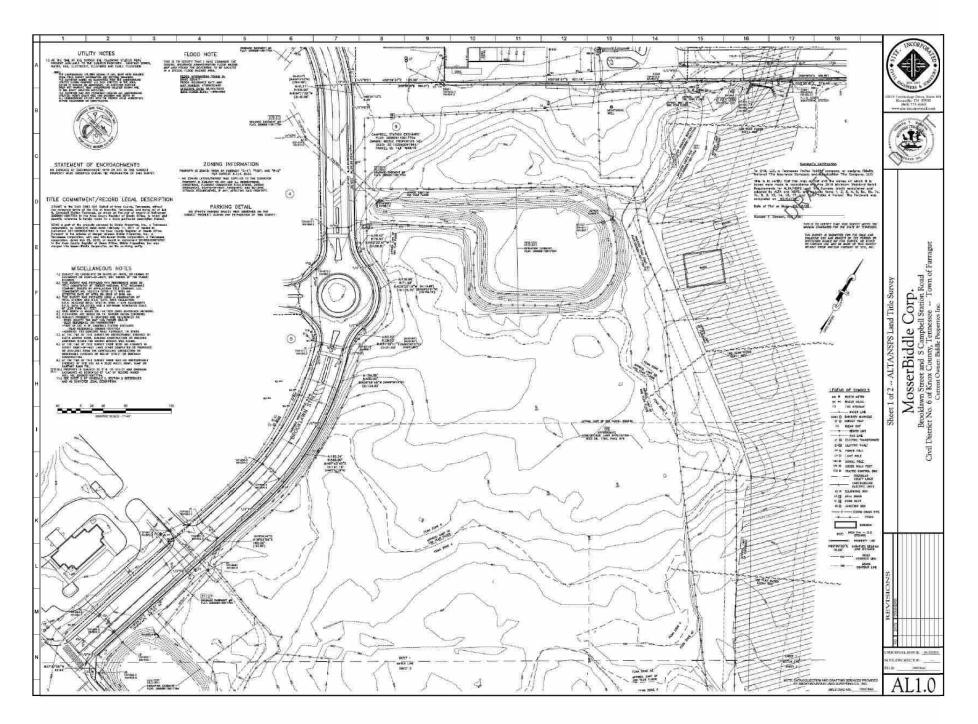

It is the hope of the development team this submittal would be found sound and representative of both the community vision and the development opportunity, each of which need to succeed before future physical implementation can begin.

Site Lighting Elements

The overall objective of the site lighting for the proposed project is to develop a safe, warm, and inviting center where hours of use and operation extend past normal daylight hours. The site is divided into the areas of in response to the different site lighting needs that can be found throughout the site.

All lighting for the proposed project will meet the Town's outdoor lighting requirements and the lighting requirements specific to the Mixed-Use Town Center land use.

- Main parking fields will include 28' tall, tapered metal poles with rectangular, flat lens, LED fixtures
 with either one, two, or three heads per pole. Higher poles in the parking fields allow the use of
 fewer strategically placed poles to avoid conflicts with landscaping and parking while providing more
 uniform light levels.
- Streets adjacent to parking or proposed buildings may utilize the same fixture and pole type as the
 main parking fields, but the pole height will be reduced to 18' to 20' in these areas to reduce the
 visual impact on adjoining streets.
- Public street and common space area lighting will be provided utilizing decorative pole types and
 fixtures as shown on the site images previously provided for the project. Fixture types will be LED,
 and poles will be in the 16' to 18' range in height.
- Pedestrian area lighting will be provided with a mixture of building wall mounted and decorative pole
 mounted lights. A diverse group of fixtures will be utilized for pedestrian area lighting to add energy
 and character to the center. Fixtures will be LED and mounted between 10' and 16' range in height.
- Service Areas not illuminated by poles will be illuminated by wall mounted rectangular fixtures similar in appearance to the lights in the main parking fields. Fixtures will be LED and mounted at approximately 16' in height.

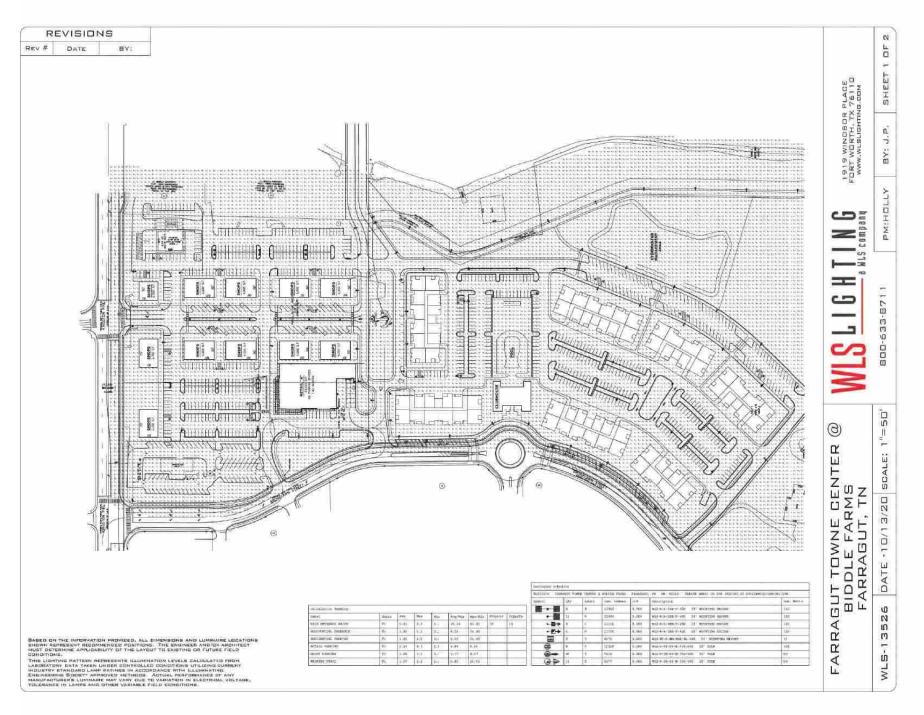

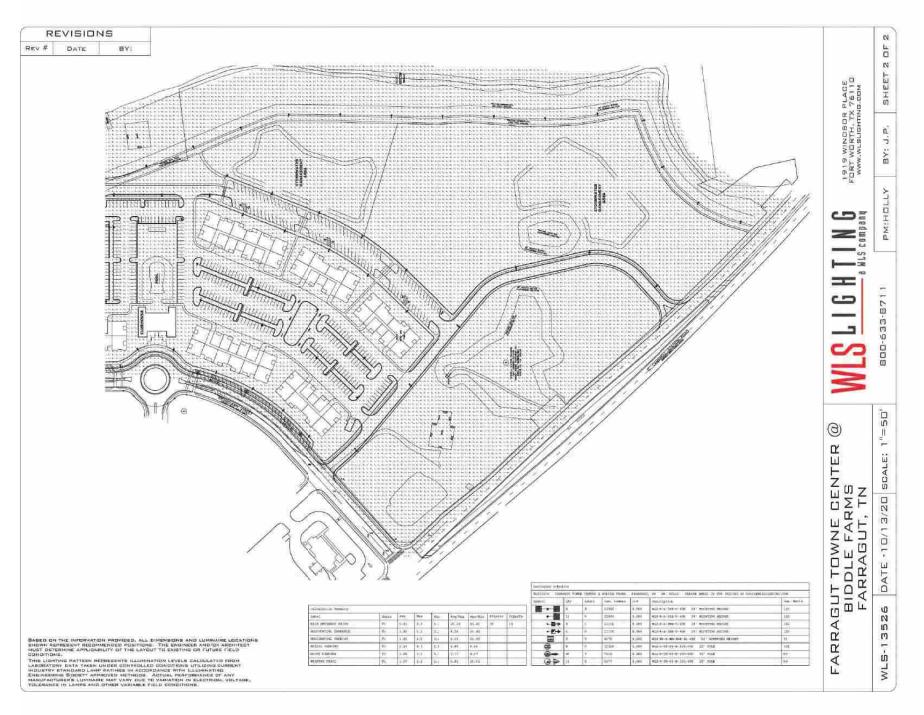

Public Gathering Spaces, Hardscape, and Paving Elements

One of the most important objectives of the proposed Town Center design is to incorporate vibrant and inviting public gathering spaces that seamlessly connect the retail and multi-family portions of the project and provide the citizens of the Town of Farragut with gathering space for public events that take advantage of the available amenities that the project offers. The seamless connection is achieved through the following elements:

- The removal of walking barriers by treating the streets without vertical curbs such that the entirety
 of the expanse is near level and fluid when entirely assigned to pedestrian access.
- The treatment of the driving surfaces in the village center with pavers to promote the impression
 of a walking surface you could drive on rather than a driving surface you could walk on.
- Pressing landscape to the edges to frame the village square instead of populating this public place bringing sidewalks closer to the building faces to isolate a central area within that pedestrian boundary that could be outdoor "flex space".

Additionally, hardscape design is a natural extension of the storefront and provides connectivity between different buildings, parking areas and pedestrian paths. Diverse scoring patterns, colored concrete, and stamping enrich the sidewalk and enhance the sense of place. Combined with landscape areas, tree wells, benches, planters, pedestrian level lighting and other site amenities, a well-designed hardscape encourages a more relaxed and friendly Town Center experience.

FARRAGUT TOWN CENTER a Biddle Farms

Architectural Design Statement

The overall objective of the Development Team has been to create an inviting mixed use community that blends commercial and residential occupancies into a walkable environment that emulates the key principles of Traditional Neighborhood Planning and Design while honoring the image and identity of the Town of Farragut as advanced in their development guidelines.

To affect this outcome the land planning effort and architectural imaging sought to promote the following key distinctions that comprise Traditional Neighborhood Design while offering an expression of style and finish consistent with the qualities that hallmark Farragut.:

- Create a Town Center that offers a site arrangement that capitalizes on the natural assets within the site, the access arrangements currently serving the site, and the existing commercial and historic occupancies of the site to be preserved.
- Seek an expanded focus on pedestrian friendly design and pedestrian interconnectivity with all
 buildings within the town center, both residential and commercial, able to move seamlessly on a
 network of walkways, trails and promenades interfacing with priority over the vehicular demands
 generated by the service activities and public events that will coexist within the development.
- Place buildings to the street to create intimate relationships with the public way between indoor and outdoor environments.
- To the extent possible, shield from the public way from large or expansive parking areas such that
 the street experience features finished and landscaped fades that create a pedestrian environment
 with priority over the vehicular environment.
- Fashion a street scape that invites leisure activities such as outdoor display, dining, and occasional
 event venues that celebrate community through heathy interaction by both business and residential
 constituents.
- Express the structures with a modeling of massing, material and detail that avoids long straight walls
 and unarticulated facades while concurrently promoting expanded "eyes on the street" (windows
 viewing the public way) to enhance a sense of interest, personal scale and a measure of perceived
 public safety.
- Use rich materials consistent with quality expressions of architecture, and workmanship associated with durable performance.
- Landscape with a view to maturity with trees and shrubbery that improve the overall quality of appearance and outdoor comfort over time.
- Visually manage service areas and infrastructure to minimize negative impact on neighboring uses

- Screen rooftop mounted equipment utilizing building elements to shield from public view.
- Develop well-engineered responses to storm water management, flood plain capacities, and environmental features worthy of protection and enrichment.
- Create a "living place" that attracts residents and merchants seeking a synergistic environment that
 offers 24/7 occupancy.
- Promote opportunities through design and site arrangement for managed and spontaneous public events through the creation of a "serse of space" within the town center, along its public river walk, and at outdoor open space suitable for unstructured park-like relaxation.

It is the hope both the plan and the character studies advanced provide both inspiration and responsive direction to the future of the Town of Farragut.

Architectural Elements

Central to the creation of a walkable mixed-use setting are features of *scale*, *safety*, *convenience*, *and character*. Each of these important standards has been used to advance concepts to the stage they are offered today.

The traditional site design standards guiding the current town center plan offer direction, but the market itself also offers important criteria that will activate their acceptance and maintain their continuing value for a project well-conceived and executed.

Consumer preference is undergoing major changes. The changes are found in everything from housing, work, school entertainment and shopping are hard to ignore. The Virus along with a preexisting trend toward internet dependency on everything we do has impacted what the future resident, business tenant, and surrounding community will expect from such an undertaking.

Please then explore briefly the key elements identified and how they have been incorporated into the planning for this important development:

Scale:

Farragut is a TOWN, and proud of its status as such. It is not an urban settlement. Within "towns" you would expect to find everything proportioned closer to the scale of an individual than that of a larger population. To that end every element of the plan must consider how to moderate the overall size of the concept such that in all areas offer a physical relationship that is comfortable and selectively even intimate. Affording the individual both personal space as well as promoting congregate place are the blended objectives.

This is best accomplished by integrating detail and rhythms that promote the experience of living, working, or shopping even when portions of the overall complex are nearly devoid of others, so as not to feel "overwhelming". Concurrently the scale should allow community gatherings of fellowship to feel secure and personal. The tools in this arsenal reside in the character of the street scape, and the cadence of features that link all parts together.

- · The frequency of spacing trees along the public promenades.
- . The comforting width of walkways that invite shared use.
- The heights of streetlights adorned with season banners the add day and night value to the street scape.
- The stature of doorways, windows, and cancpies offering incremental shade and relief along the main street,
- · The invitation to enjoy either the inside or outside parts of a vender's offering.

- The use of appropriately scaled signs directed at the individual rather than the highway.
- The richness of materials employed that show detail and craftsmanship.
- · The feature accents of street furniture,
- · plus others....

...all combine to establish scale that when occupied offers a warm and comforting reaction and promotes a continuing invitation to explore the range of venues and passages offered for inspection.

Page 1 of 3

Safety:

Scale is a natural companion to "perceived" safety. When coupled with the planning principles of *Crime Prevention Through Environmental* Design (CPTED) the physical place that is created advances the perception of safety to a functional level of improved safety.

- The use of "Eyes on the street" is a phrase often used to promote the frequency of windows facing
 public and private areas as a form of courteous intimidation to those who would do harm.
- The avoidance of easily accessed blind or obscure service areas that can harbor mischief.
- The use of lighting the softly distributes light instead of introducing glaring light the obscures areas
 around it.
- · The management of shrubs and landscape kept low and arranged to avoid creating hiding areas.
- · The organization of the plan in ways that make wayfinding intuitive.
- The structuring of street crossing that declare with feature pavement "the pedestrian has priority".
 ...all contribute to the sense of place that feels and functions with personal safety as a priority

Convenience:

Convenience is not measured in distance; it is measured in time! The human reaction to the question of "How far is it from here?" is to respond with a time reference such as, "About 20 minutes away". Time can be an obstacle unless the experience of time is filled with interest along the way.

The integration of mixed use in a 24/7 setting makes daily activities feel convenient. Even if just walking the dog, the setting allows the effort to engage with views and points of interest that make the activity fulfilling the time index feels less of a compromise.

Convenience can also be a competitor to the mission of a well-ordered environment. Today everything from class work and vocation, to shopping and worship can be done with a click of a button from a comfortable chair at home. This tendency to hibernate is contrary to building community. When the experience of place can activate "mobility" over "time efficiency" and the activities of our daily routine are enriched because they can occur both time efficiently and within a pleasing setting, then the best form of convenience has resulted. When personal mobility becomes an alternate to driving or Ubering, society becomes healthier and more engaged with the place they live, work, and shop and the people they share that place with.

Character:

When considering what makes one place more inviting and interesting than another, the distinction derived from its appearance can often be the measure of difference. More than just the look of structures, it is the full assemblage of all parts of the created environment that create the signature of something special.

Measured uniformness has value in building a cohesive feel to a settlement of many parts and functions.

- · The treatment of the walking surfaces,
- The range and appeal of exterior materials,
- The selection of landscape species and their orderly application and maintenance,
- The timeless execution of facades and focal points,
- The invitation of patina as an expression of maturity;

...can all be unifying parts of what individually might be seen as an assortment of separate functions and features.

A theme need not be expressed in a style, **but rather in an experience** that serves the overall objective. The Town Center thus must offer a holistic experience unified with elements of sight, sound, textures and potentially even fragrances, while still allowing variety of expression within that range of consistent quality, that combined keep all the parts feeling as members of a unified family of thought.

Page 2 of 3

FARRAGUT TOWN CENTER a) Biddle Farms

The Application:

The mixed-use nature of the Town Center is evidenced by the fusion of residential and business uses into one cohesive composition. In true town fashion these are not competitive but complementary interests. Both rely on each other to optimize the experience that can only be fashioned with the merger of these important parts.

Scale: The public face of each sector shares a common pattern of materials and forms. Both have been enveloped with brick, siding, and window/door treatments of preferred quality as a testament to durable and traditional flavors.

The exterior faces have been fashioned with varying applications of these materials so to generate a measure of variety without appearing as random or disconnected parts.

The scale of the mains street seeks a human scale with statured two-story or appearance thereof facades offering both vertical and horizontal modeling, while avoiding the conventional lineal alignment often found in commercial centers.

The scale of the residential structures, while higher by floor count, is rusticated with bolder forms at the lower levels, slowly stepping back to lighter forms as the building elevation rises to the roof level. The scale is also moderated by the horizontal animation of the plans and the treatment of exterior materials on the façade to emulate attached narrower independent facades, avoiding one monolithic building statement.

Safety: The arrangement of all structures is such that none have a "backside". All buildings are surrounded by publicly exposed facades (with exception of one small and secured service lane between gracery and other retail elements). Each façade is companioned by a pedestrian network that abuts parking and invites ready access to front and rear approaches, and selectively to area gardens between structures that connect all sides with walkable interconnectivity.

In the commercial sector, along the main street, parking is brought to the curb for quick access, while in most areas the bulk of the parking field is fragmented into smaller separate zones and held away from the "public street" frontage

The intimate context of the main streets and the public square offer clear oversight from stores fronts and residential windows. The larger parking fields offer shielded box lighting to insure nighttime legibility for patrons after dark.

In the residential sector, the buildings compose a collar around an internal parking domain set aside exclusively for residents, awarding them a safe relationship between vehicle and dwelling door. Concurrently the outward face of this collar orients to the public thoroughfares with a public entry duplicating invitation for guest. Here again windows, doors, and walkways surround buildings and advance "eyes of the street" as a prevention to unwanted activity.

Resident parking is lighted similar to the commercial parking fields, while street lighting along the public road perimeter mirrors the scale and treatment of the main streets in the commercial zones.

Convenience: Both the commercial and residential areas merge around the town square, the central hub of all development interaction. From this hub, ready access to home, shopping, park areas, and external routing are easily and quickly affected.

Within the residential sector, residential amenities are centrally located within reach if not line of site from dwellings that surround this lifestyle feature.

The convenience internally is matched by the convenience directed to adjacent features equally important to the Town Center, such as shopping across Brooklawn Blvd, education across Kingston Pike, town government offices to the west, and professional services along the frontages of the external public roads. For many within, an unusually large number of daily destinations are within a few minute walk or bike ride.

Character: Today's market seeks expressions that offer reflections of the past, housed in settings appropriate to current lifestyle and technologies. Achieving both a classical sense of form with traditional materials and applications, while expressing the "NOW" demands of our current wants requires a balance of elements that offer both collective distinction and harmonious interplay.

The combination of all the elements that speak to our physical senses; sight, smell, touch, sound, and even taste, are the palate that has guided the design representations. More will come into focus as the design is refined through the continuing advancement of this proposal and through the life of its successful operations.

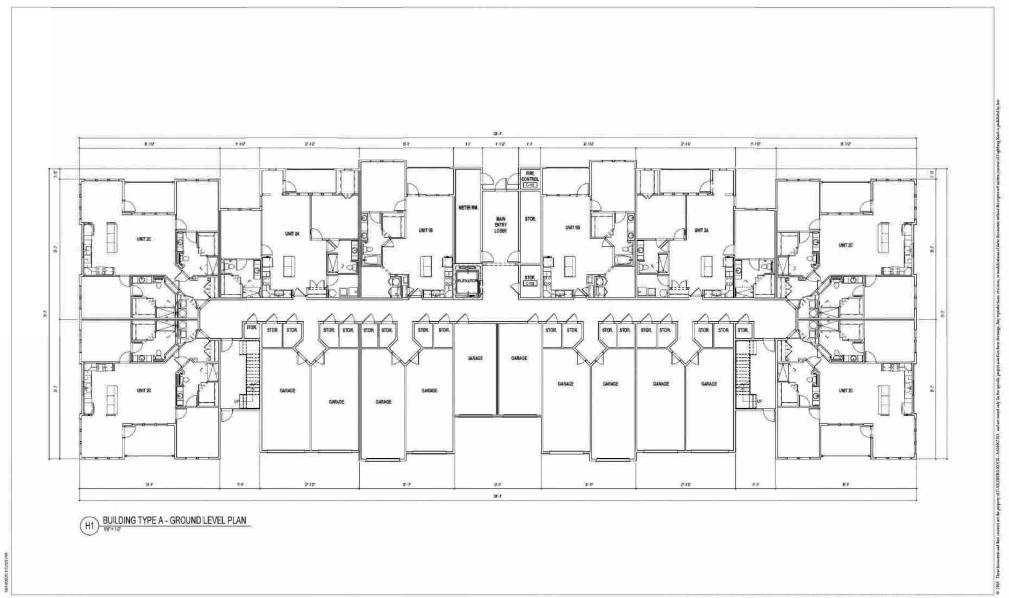

This proposal seeks to establish a feel and identity that would hallmark Farragut as a representation of its selfimage and a center piece of its community's leisure lifestyle.

Summary:

It is unlikely the lessons learned from the Corona virus will ever go away. Magnified home deliveries, quick pick up and Uber/Lift accommodations, de-congested public places, touch free appointments, work at home preference are all here for the long term. Accommodation for this new paradigm must also be considered as many seek the efficiencies in time they afford.

The proposal has evolved since the design process began, in recognition of this changing condition and the permanence it has already vested in the lives of all residents. Continuing lessons remain ahead and the need for flexibility should never be forgotten. **Static pictures are not as vital as moving pictures.** The presentation offers a point of beginning but not the final outcome. That will continuously model as we move together in the future.

FARRAGUT TOWN CENTER a Biddle Farms

Conceptual Iconic Element at Main Street Entrance

Main Street Entry Iconic Element - The tower elements will straddle the sidewalk into the development as a pedestrian gateway and flank the drive lane as vehicle gateway. The flanking walls are intended as both a grade wall as well as project identification. The towers borrow from historic gateway formations and employs brick as the primary structure face. The vertical tiers contain a mid-level with a back lit panel that could be used for "feature events" as if an illuminated street poster. The top circle could contain the development logo.

FARRAGUT TOWN CENTER a Biddle Farms

Conceptual Signage Vision

The overall objective of the proposed Town Center's conceptual signage vision is provide a consistent, effective, and unified approach to assist the citizens of the Town of Farragut convenient identification of the tenants of the project, and allows the tenants ample opportunities to promote their brands and assist in navigation to their store locations.

All Signage shall meet the Farragut Municipal Code signage requirements.

Several types of signage proposed for the project include:

- Multi-Tenant Monument Signage The priority of this signage is frontage identification for the users
 that would otherwise be lined up in a lineal row all facing the street in the manner of the prior retail
 development. In the aggregate the proposition does not increase the global allocation of signage
 found in more conventional solutions. Rather it repositions it to add orientation, invitation, and retail
 activity to the Main Street, which is the focus of the "town center" concept.
- Ground Monument Gateway Signage The ground monument signage similarly replaces a host of
 individual signs had the site been platted to allow for each building and tenant to have their own
 "fee simple" parcel. Their positioning along the secondary roads is in return replacing signage for
 many internal users organized in another development pattern than a town center model.
- Primary Building Signage This signage is proposed to present a consistent approach regarding signage size and presentation while allowing retailers the opportunity to present their brand with little or no compromise. Both wall signage and under canopy blade signage are proposed.
- Wayfinding & Accent Signage This signage, often cast at corners or suspended from cross arms of light standards that support multiple suspended signage shingles in a series with arrows pointing in the direction of each institution are

Hydraulic & Hydrology Study Summary and Recommendations

Hydraulic and hydrology models were requested and received from FEMA for both Turkey Creek and North Fork Turkey Creek. The results of both models match the effective results as shown in the Flood Insurance Study (FIS) number 47093CV001B. Both models were updated with new ground data as gathered by our project surveyor. The Base Flood Elevation (BFE) results for both Turkey Creek and North Turkey Creek models were verified to become the Existing Conditions Model (ECM).

From this point, the ECM was used to create the Proposed Conditions Model (PCM). The PCM included the conceptual layout for the development called "Farragut Town Center at Biddle Farms" provided by SITE Inc.

Based upon the results of the hydrology study, not only can the proposed development be constructed, but along with the new bridge over Turkey Creek and other measures undertaken will also help alleviate some of the existing conditions.

Traffic Impact Study Summary and Recommendations

The study of the Biddle Farms, a proposed mixed commercial and residential development evaluated the projected traffic conditions. Background traffic was determined using a 3.5-percent annual compounded growth rate until the horizon year 2025. Traffic associated with the proposed project was then generated and distributed to the proposed site accesses. The proposed site may generate approximately 8,480 daily weekday trips. After the consideration of pass-by traffic and internal trips, approximately 6,730 new daily trips (Primary) may be generated for a typical weekday. Using the identified turning movements for the projected traffic conditions, unsignalized and signalized capacity and level of service analyses were conducted using the 2000 Highway Capacity Manual.

Current conditions for study intersections are LOS E or better. Intersections are operating with a minimum LOS C except for the Kingston Pike intersections with Campbell Station Road and Concord Road. The PM peak hour for the intersection of Kingston Pike at Campbell Station Road is a LOS E and operates over capacity with a V/C ratio of 1.08, thereby an operation that is unstable and experiencing saturated traffic flows resulting in significant congestion with adverse traffic queues. The Kingston Pike intersection with Concord Road is a LOS D during the peak hours with a capacity ratio exceeding 0.90 indicating traffic conditions becoming unstable.

From the analyses conducted, changes in intersection capacity and delays are minimal for the study intersections, and levels of service did not change significantly from the background traffic conditions. Analyses determined that the proposed site development did not result in any significant changes from the analyses conducted for the background traffic conditions which found that the Kingston Pike intersections with Campbell Station Road and Concord Road may experience a LOS F during the PM peak hour and an E during the AM peak hour, respectively; the site impact increase the average intersection delay less than 6 seconds for either intersection and the increase in the V/C ratio not more than 4-percent. The poor levels of service for the

Kingston Pike intersections with Campbell Station Road and Concord Road would occur regardless of the proposed development.

The proposed site does not have a significant impact on the adjacent road network as traffic projections and intersection analyses found little impact resulting from the proposed development. This impact is minimized with the proposed signalized accesses available to the site thereby affectively distributing the trips generated by the mixed-use development. The proposed development is a lower trip generator than the zoned property which could possibly develop an approximate 295,000 square feet of retail uses. The comparison of the trip generation found the proposed site reduces the trip generation potential as compared to the possible development with the current zoning. With the same pass-by rate of 20-percent applied to the trip generation of a 295,000 square foot center, the daily trips generated may be 3,300 fewer daily trips and 390 fewer PM peak hour trips with the proposed mixed commercial and residential development. An additional approximate 75 trips might be generated during the AM peak hour with the

mixed-use commercial and residential site but is not significant as it is managed with numerous accesses to the adjacent street network.

RECOMMENDATIONS

The analyses conducted and the review of the traffic volumes identified the following recommendations:

Minimize landscaping, using low growing vegetation, and signing at the planned site accesses.

Intersection design should conform to the recommended standards and practices of the American Association of State Highway and Transportation Officials, the Institute of Transportation Engineers, Tennessee Department of Transportation (TDOT), and the Town of Farragut. The proposed site access for the site was found to operate at acceptable levels of service; however, the adjacent Kingston Pike intersections with Campbell Station Road and Concord Road may experience lower and unacceptable levels of service as the background traffic will have a significant impact on the intersections' capacities. Background left-turn volumes exceed 300vph for the northbound, southbound, and eastbound approaches of the Kingston Pike and Campbell Station Road intersection thereby requiring double left-turn lanes. Double left-turn lanes for the Kingston Pike and Campbell Station Road intersection would be very difficult with the current development of the intersection corners. The provision of these double left-turn lanes would require several design exceptions if they were to be considered by the Town of Farragut, minimizing any right-of-way required.

Mitigation of background traffic impacts for the of Kingston Pike intersection with Concord Road is an additional northbound right-turn lane. The mitigation of both Kingston Pike intersections with Campbell Station Road and Concord Road would return level of service and capacity back to that currently experienced for the 2020 traffic conditions. The development of the Biddle Farms property did not determine any required mitigation as its impacts were not significant and acceptable levels of service provided for the accesses to the site.
